CONSULTATION QUESTIONS

Overall Approach

This consultation reflects a continuation and development of the Scottish Government's current approach for mental health. There is a general consensus that the broad direction is right but **we want to consult on:**

- The overall structure of the Strategy, which has been organised under
 14 broad outcomes and whether these are the right outcomes;
- Whether there are any gaps in the key challenges identified;
- In addition to existing work, what further actions should be prioritised to help us to meet these challenges.

The NHS Confederation briefing "From Illness to Wellness" (October 2011), recognises the spiritual aspects of life as one of the seven dimensions of wellness. As such, it is imperative that spiritual care is recognised for the role it plays in the recovery journey of those accessing support in the mental health systems within Scotland. The NHS Education for Scotland publication "Spiritual Care Matters An Introductory Resource for all NHS Scotland Staff" (2009), clearly illustrates the role and evidence base for this therapeutic intervention. This model of practice, to support those seeking meaning, purpose and belonging during their healthcare journey and afterwards, should be adopted by all staff, with healthcare chaplains delivering specialist or more complex spiritual care. Therefore, it must be referenced within the new mental health strategy for Scotland.

Improvement Challenge Type 1

We know where we are trying to get to and what needs to happen to get us there, but there are significant challenges attached to implementing the changes. An example of this is the implementation of the Dementia Strategy. There is a consensus that services for people with dementia are often not good enough and we already know about a range of actions that will improve outcomes. However some of these changes involve redesigning the way services are provided across organisational boundaries and there are significant challenges attached to doing this.

Question 1: In these situations we are keen to understand whether there is any additional action that could be taken at a national level to support local areas to implement the required changes.

Evidence shows a key determinant of a positive patient outcome is the quality of the therapeutic relationship between client and professional (Howgego et al 2003). Patients' complaints about staff interactions include themes of not feeling listened to, not getting the opportunity to check their personal understanding of information being delivered and not having opportunities to discuss the matters they wish to (Brocklesby 2010). This directly impacts on issues such as compliance with medication regimes and

therefore outcomes.

Rather than focussing on the logistics of service development, delivery and re-design, priority should be given to the improvement in quality in the way practitioners interact with their service users. This would address key areas highlighted in the Quality Strategy around the quality of patient / staff relationships (i.e. Caring, compassionate attiude and communication). One vehicle for improving professional confidence and competence in this area is clinical supervision (Brunero and Stein-Parbury 2008). Therefore a focus on improving the quality and quantity of supervision that front line mental health staff receive would undoubtadley improve patient experience and outcome. In particular, the use of values based practice / supervision as a model would be useful. The National Mental Health Development Unit (2010) notes that values based reflective practice "relies on subjectivity. It seeks to get as close as possible to the values, the points of view and perspectives of those directly concerned in a given direction. " Thus allowing the patient experience to come to the fore of the practitioners reflective experience. Healthcare chaplains / spiritual care providers are particularly suited to the delivery of this type of supervision due to their professional experience and qualifications.

Improvement Challenge Type 2

We know we need to improve service provision or that there is a gap in existing provision, but we do not yet know what changes would deliver better outcomes. Supporting services to improve care for people with developmental disorders or trauma are two areas where further work is needed to identify exactly what needs to happen to deliver improved outcomes.

Question 2: In these situations, we are keen to get your views on what needs to happen next to develop a better understanding of what changes would deliver better outcomes.
