Dear Lord Bonomy

**MANAGING THE RURAL FOX POPULATION THROUGH UTILISATION OF A FULL  
PACK OF HOUNDS FLUSHING TO GUNS**

I write to you as a sheep farmer in the Scottish Borders where I and my husband farm sheep over 3000 acres of rough hill grazing. I would like to voice my full support to the **current** legislation regarding hunting with hounds and hope that this continues in its current state as an effective and humane way to manage the fox population throughout the countryside.

Our local pack of hounds hunts effectively within the law utilising a full pack of hounds to flush foxes to guns for dispatch. The Liddesdale Foxhounds do not hunt on what is now considered 'the traditional' mode of transport for hunting i.e. horses. They hunt either on motorbike or foot and this is, we consider an equally effective way to carry out the job.

We know that the mode of transport adopted is irrelevant, it is clearly the humane despatch of the targeted species which should be considered and no consideration should be given to the preconceptions of the mode of transport that is used or indeed the type of clothes that are worn. Indeed for clarity our local pack is run by farmers, for farmers or land owners to serve a job that is required by them to help control this wild mammal.

As farmers we can confirm that fox control is entirely necessary, particularly leading up to the lambing season. We would like to also note that flushing foxes with hounds helps maintain the **healthy** fox population which we consider is paramount in ensuring minimum fox disturbances during lambing time. We know that a **healthy** fox very rarely disturbs young lambs and ewes and it is indeed the unhealthy foxes that are far more likely to do this because it is easier for them to feed. It is in this circumstance we know that this form of hunting is effective; hunting and dispatching the 'weaker' or 'unhealthy' fox with a pack of hounds to guns.

We can confirm that our Local pack hunts very effectively within the law and during every hunt (twice weekly from September to March) there is always a minimum of three guns present. I would also like to confirm that hunting with a whole pack of hounds is by far the most effective way of flushing out a fox and this can be evidenced by the number of foxes that have been dispatched during each season since the 2002 Act.

We would like you to note that for us and our neighbours as farmers, hunting twice a week is the most time effective and cost effective. The hunting service is free to Farmers and Land Owners and Forestry Owners/Managers and an extremely welcomed service. This is

opposed to snaring which is not only a cruel way to watch an animal suffer, but snares need to be checked a minimum of daily and other animals do get damaged or suffer if caught in them; night shooting takes hours or dedicated staff and is quite often not a 'clean' dispatch (animals do suffer if it's not a clean kill), it is also costly.

We hope that our points are considered and that hunting can remain in its current state in Scotland for the foreseeable future and not used as a political spinball for winning votes. We strongly believe it works as an effective way to control the fox population in rural Scotland and certainly does in the country we farm as well as that of our neighbours; we want to see hunting in its current form remain as an extremely valuable service to the rural community.

Yours faithfully

Sarah Laing
