Supplementary Guidance

A suite of supplementary guidance (SGs) is currently being produced by the Council. Most of these SGs are updated versions of previous Supplementary Planning Guidance (SPG) whilst others cover new topic areas (* denotes new SGs). There are 17 SG’s in the series, all of which seek to provide more detailed guidance on how particular local development plan policies should be applied in practice.

These SGs form a statutory supplement to the Local Development Plan, and are intended to expand upon planning policies and proposals contained in the proposed plan.

A full list of the supplementary guidance available in this series is found below.

- Development in the Countryside *
- Neighbourhood Design
- House Extensions and Alterations
- Shopfronts
- Biodiversity and Development
- Trees and Development
- Frontiers of the Roman Empire (Antonine Wall) World Heritage Site
- Local Nature Conservation and Geodiversity Sites *
- Landscape Character Assessment and Landscape Designations *
- Education and New Housing Development
- Healthcare and New Housing Development *
- Affordable Housing
- Open Space and New Development
- Spatial Framework and Guidance for Wind Energy Development
- Low and Zero Carbon Development *
- Listed Buildings and Unlisted Properties in Conservation Areas *
- Renewable Energy *

Appendix 2 – Exterior Finishes
Appendix 3 – Useful Contacts
1. Introduction

What is the purpose of this guidance?

1.1 The Falkirk Local Development Plan sets out the following vision for the Falkirk area: “A dynamic and distinctive area at the heart of Central Scotland, characterised by a network of thriving communities and green spaces and a vibrant and growing economy which is of strategic significance in the national context, providing an attractive and sustainable place in which to live, work, visit and invest”.

1.2 This supplementary guidance supports this vision by setting out design aspirations for the design of shopfronts within the Falkirk Council area. Well-designed shopfronts not only add to the attractiveness of an area, they support economic regeneration which in turn brings added footfall and increased sales turnover. Shops with a poor appearance detract from the character and amenity of the townscape and in some cases lead to a downturn in business.

1.3 One of the recommendations of the National Review of Town Centres External Advisory Group Report: Community and Enterprise in Scotland’s Town Centres (July 2013) is that we need to make best use of resources including the re-use of existing buildings and existing town centres. Retail activity, it states, is a crucial component of the “rich town centre context it takes place in: an integrative human weave of homes, offices and parks, and social, civic and cultural institutions”.

1.4 The four policy principles set out in Scottish Planning Policy, June 2014 - A Successful, A Sustainable Place, A Low Carbon Place, A Natural Resilient Place and A Connected Place - are underpinned by the aspiration to create high quality places by adopting a design - led approach. Proposals for new shop fronts or alterations to existing shopfronts that meet these principles will be supported.

1.5 Shops contribute to the social and cultural history of a place; many shops are associated with family businesses, distinctive architecture and signage all of which enliven our towns and cities.

1.6 Traditional shops are those that date back to past eras, such as Georgian, Victorian through to the post war period. Their original details and features bring distinctive character to our streetscapes.

What is contained in the guidance?

1.7 Highlights the local and national policy framework which provides the context for shop front design and signage Falkirk LDP, D05 and D06

- Sets out the process in the Falkirk Council area which designers, shopowners and proprietors should follow - includes advice on pre-application consultation, advertisement consent, listed building consent, planning permission.

- Provides a history of local shopfronts including traditional shopfronts in historic buildings covering a variety of styles and eras from Victorian, Edwardian thro to Art Deco and modern shopfronts in buildings found in the Falkirk Council area.

- Provides design guidance on traditional and contemporary shop fronts including general principles, restoration and repair principles, advice on adaptations and alterations to traditional shopfronts including fixtures and fittings associated with illumination, blinds and canopies, other modern fittings, security measures, ventilation, internal false ceilings and signage.

- Through this approach, shop owners, shop tenants, developers and others are expected to adopt best practice in the design of new shop fronts and in the repair, restoration and adaptation of existing shopfronts.
1. Introduction

Where does the guidance apply?

1.8 This guidance applies to the design of shopfronts in new buildings and to the repair, alteration and wholesale replacement of existing shopfronts in existing buildings of any age or style.
2. Policy Framework

2.1 The relevant policies of the Falkirk Local Development Plan are as follows:

Policy D05 Advertisements
Proposals for advertisements will not be permitted where they would have an adverse effect on the visual amenity of the property or the wider area, or would create a road safety hazard. In particular:

1. The prevention of advertising clutter through a proliferation of signs on a property or in a locality will be a priority;
2. Advertising should be sensitive to the property on which it is mounted in terms of scale, design and positioning, and should be seen as part of the overall design of the property, rather than an add-on;
3. Illumination of adverts will be controlled in the interests of amenity and road safety, and will generally be prohibited outwith the Urban Limit;
4. Advance directional signs will not generally be permitted unless the display is considered to be in the public interest; and
5. Advertising hoardings and rotating/moving advertisements will not be permitted where
   - they will prejudice the placemaking priorities set out in Policy D01 by virtue of visual intrusion;
   - they will compromise residential amenity; or
   - they are likely to cause driver distraction, or interfere with visibility at potential conflict points such as junctions, pedestrian crossings, hazard warning signs, low bridges and sections of road with poor forward visibility.

Policy D06 Shopfronts
The design of new or altered shopfronts should be well-proportioned and sympathetic to the character of the building of which they are part, as specified within Supplementary Guidance SG04 ‘Shopfronts’.

Policy D09 Listed Buildings
The Council supports the sustainable re-use and management of the historic built environment, and on that basis there is a presumption against demolition or any other works that would adversely affect the special interest or setting of a listed building. The Council recognises, however, that listed buildings will require alteration, extension and adaptation from time to time to remain in beneficial use and encourages creative and sensitive development where there are no such adverse effects. Accordingly:

1. The layout, design, materials, scale, siting and use of any development affecting a listed building, or its setting, including extensions, replacement windows, doors, roofs, rainwater goods, boundary treatments and other features, shall be appropriate to the character and appearance of the building and its setting, and should conform to Supplementary Guidance SG18 ‘Design Guidance for Listed Buildings and Non-Listed Buildings in Conservation Areas’.
2. Proposals for the total or substantial demolition of a listed building will only be supported where it is demonstrated beyond reasonable doubt that every effort has been made by all concerned to find practical ways of keeping it. In particular it should be demonstrated that:
   - the existing building is no longer of special interest;
   - the existing building is incapable of physical repair and re-use, as shown by the submission and verification of a thorough structural condition report;
   - the costs of repair and re-use are such that it is not economically viable. Supporting evidence should include a full economic appraisal, evidence that grant aid is not able to meet any funding deficit, and evidence that the building has been actively marketed at a reasonable price and for a period reflecting its location, condition and possible viable uses without finding a restoring purchaser; or
   - the demolition of the building is essential for the delivery of significant economic benefits for the local or wider community.
3. RCAHMS will be formally notified of all proposals to demolish listed buildings to enable features to be recorded.

Policy D10 Conservation Areas
The Council will protect the historic character and visual amenity of each Conservation Area. Accordingly:

1. New development in Conservation Areas should not erode the character and appearance of the Conservation Area, with particular reference to the historic pattern and density of development; its setting; the architectural style, massing and materials of buildings; landscape treatments; and boundary features.
2. The layout, design, materials, scale, siting and use of any development affecting an unlisted building in a Conservation Area, including extensions, replacement windows, doors, roofs, rainwater goods, boundary treatments and other features, should respect the character and appearance of the original building, and should conform to Supplementary Guidance SG16 ‘Design Guidance for Listed Buildings and Non-Listed Buildings in Conservation Areas’.
3. Demolition of unlisted buildings within Conservation Areas which make a positive contribution to the special character and appearance of the area will only be supported where:
   - the existing building is incapable of physical repair and re-use, as shown by the submission and verification of a thorough structural condition report; or
   - the costs of repair and re-use are such that it is not economically viable. Supporting evidence should include a full economic appraisal, evidence that grant aid is not able to meet any funding deficit, and evidence that the building has been actively marketed at a reasonable price and for a period reflecting its location, condition and possible viable uses without finding a restoring purchaser; or
   - the demolition of the building is essential for the delivery of significant economic benefits for the local or wider community; and
   - proposals for redevelopment of the site contribute to the character and appearance of the conservation Area. Existing buildings shall be retained on site until the redevelopment commences.

3. When to seek Listed Building Consent, Advert Consent and Planning Permission

Is my shop in a Listed Building?

Is my shop in a Conservation Area?

Yes

No

New Shopfront or Signage

Alteration

✓ Listed Building Consent
✓ Planning Permission
✓ Advertisement Consent*
✓ Pre-Application discussion recommended with Development Management, Development Services, Falkirk Council.

Like for like repairs may not require Listed Building Consent or Planning Permission. Any alterations should be discussed at the earliest stage with Development Management, Development services, Falkirk Council. Accurate working drawings of the work proposed should be submitted for inspection.

Email: dc@falkirk.gov.uk
Telephone: 01324 504748

Critical Information
It is a criminal offence to demolish, alter materially, or extend a listed building without listed building consent. It is also a criminal offence to fail to comply with conditions attached to listed building consent. Planning Authorities have the option to take enforcement action prior to prosecution. A person guilty of an offence shall be liable on summary conviction to imprisonment for up to 6 months or a fine of up to £50,000, or both, and on conviction on indictment an unlimited fine and up to 2 years imprisonment or both. Unauthorized alterations often come to light later as part of the conveyancing procedures when the property is offered for sale.

Building Standards (Scotland) Regulations.
You may require a building warrant for certain works.
Please contact Building Standards, Development Services.

Telephone: 01324 504985

SG04 Shopfronts November 2015
3. When to seek Listed Building Consent, Advert Consent and Planning Permission

- **Is my shop in a Conservation Area?**

  - **Yes**
    - **New Shopfront or Signage**
      - ✔ Planning Permission
      - ✔ Advertisement Consent.* This depends on final details of work proposed. A pre-application discussion is recommended with Development Management, Development Services, Falkirk Council, at the earliest stage.
    - **Alteration**
      - ✔ Planning Permission
      - ✔ Advertisement Consent*
      - ✔ Like for like alterations are detail dependant. If like for like repairs are not recommended by the Planning Authority on design and authenticity grounds, historic restoration is preferred. A Pre-Application is discussion recommended with Development Management, Development Services, Falkirk Council, at the earliest stage.
  
  - **No**
    - **New Shopfront or Signage**
      - ✔ Planning Permission
    
    - **Alteration**
      - This may require Planning Permission but this is dependant on the details of the proposed work. Any work should be discussed at the earliest stage with Development Management, Development Services, Falkirk Council, through a Pre-Application discussion in order that advice may be given.

- **No**
  
  - **New Shopfront or Signage**
    
  - **Alteration**
    - This may not require Planning Permission but this is dependant on the details of the proposed work. Any work should be discussed at the earliest stage with Development Management, Development Services, Falkirk Council, through a Pre-Application discussion in order that advice can be given.

* In all cases advertisement consent is not always required, and depends very much on the lettering, its height and position etc. Discussion with Development Management about signage and advertisement consent is recommended at the Pre-Application stage.
4. History of Local Shopfronts

The History of Shopfronts and Shop fronts in the Falkirk Area

4.1 The Falkirk area has a rich commercial history. The earliest form of buying and selling in the Falkirk area was carried out at markets and fairs such as the Falkirk Tryst. By the end of the 18th century, markets and fairs had transformed into fixed shops with identifiable shopfronts.

4.2 During the Georgian and Regency period, shopfronts were adapted from ground floors of existing residential/domestic properties. At that time, construction techniques and glass sizes were limited and shopfronts were characterised by domestic sized windows and thick masonry piers, required to support the building above.

4.3 As time went on, the formal design of shopfronts signified a means of competition between neighbouring shop owners, displaying their businesses as well as products.

4.5 By the early 20th century, shopfront design had become more sophisticated, incorporating curved glass, recessed and decorative entrances with detailed mosaic tiling on the walls or floors, and fine mahogany doorway and window details.

4.6 As a result of the Paris Exhibition in 1925, an influx of new shop front styles arrived including Art Deco/Moderne incorporating geometric lines and motifs, culminating in an ultra-modern, streamlined look. Technical innovations in materials played their part in influencing design including Vitrolite coloured structural glass, and other mass produced ceramic, metal and glass products. Many local 1930’s shopfronts have survived.
4. History of Local Shopfronts

4. History of Local Shopfronts

**Recent Developments in Shop Front Design**

4.7 Shop front design has changed dramatically over the last 50 years. As retailing methods have changed, so has the way in which shopfronts reflect these changes. Where shop owners in the past took pride in creating intricate and finely detailed shopfronts designed to please the eye of customers, much modern everyday shop front design practice tends towards simple compositions.

4.8 Much of the architectural heritage of the Falkirk Area has been lost as a result of the loss of historic shopfronts. Many traditional shopfronts have been either completely replaced or stripped back to the point where there is very little visual interest. However, some original frontages in the area have been retained and refurbished.

4.9 The general decline in the standard of shop front design is also related to changing lifestyles and business practices. Living over the shop has largely disappeared and there has been a significant decrease in family retail businesses such as small shops offering traditional services. Bakers, butchers, fish mongers, and grocers are competing with large corporate stores and out of town retail parks which provide substantial areas of car parking.

4.10 This guidance aims to arrest this decline by setting out aspirations for high quality design and vitality in local shops and shopping centres within the Falkirk Council area.

Introduction

5.1 The greater Falkirk Council area includes a rich diversity of traditional buildings many of which incorporate retail and other commercial uses at street level and in some cases at upper storeys also.

General Principles

5.2 In both traditional and contemporary buildings, best practice in the design of new shopfronts relates to symmetry, careful balance of proportions, use of high quality materials and consideration of the period and architectural style of the overall building as well as the rhythm and character of the street in which the building is located.

The nature of the retail use also influences design – small scale goods require higher stall risers than larger scale goods where glazing areas require to be maximised.

Rhythm of shopfronts with balanced and controlled proportions in a modern building, Stenhousemuir.

Shops selling luxury goods tend to incorporate high quality materials to reflect their use.

5. Design Guidance

Contemporary Shop Fronts

5.3 Simple designs incorporating large areas of clear glazing are common to shopfronts in modern buildings; uncomplicated designs usually do not detract from the architecture of the surrounding buildings and easily blend with the upper storeys of the host building.
5. Design Guidance

Restoration and Repair of Traditional Shopfronts

5.4 Retention and refurbishment of traditional shopfronts can offer a cost effective and aesthetically appropriate solution.

5.5 It is preferable for repair and restoration schemes for traditional shopfronts to be informed by research into the original, historic design of the shop and its parent building. Various sources can provide this type of background information - national collections held by Historic Scotland/ RCAHMS, local museums in the Falkirk area, archives run by Falkirk Community Trust http://collections.falkirk.gov.uk/home.page.do - where historic Dean of Guild and Building Warrant Drawings can be inspected, local business archives, as well as historic paintings, photographs and drawings and Falkirk Local History Group http://www.falkirklocalhistorysociety.co.uk/.

5.6 On site down-taking and inspection can be equally informative as, in some cases, original details or even wholly intact shopfronts have survived beneath cumulative constructional layers from later periods. Together with the shop frontage, other existing fabric including decorative plasterwork to original ceilings and walls, ceramic tiling, glass and joinery work is often uncovered during refurbishment works; in such cases, the original detailing should be conserved through repairs to match original design and materials. It is recommended that any investigative down-taking should be handled with care, preferably under the supervision of building and conservation specialists.

5.7 Previous repairs or adaptations are often out of keeping with the original design and materials – common examples include over-sized fascias and badly proportioned aluminium and plastic framed windows and doors; in such cases, when the opportunity arises, modern interventions should be carefully removed and great care taken to respect the original concept, construction detailing and integrity of the component elements.

5.8 Original colour schemes can be detected through paint scrape and analysis but should only be reinstated where deemed to be appropriate by the Planning Authority.
5. Design Guidance

Examples of Inappropriate Alterations and Suggested Improvements

Fascia depth is critical in the design of a shopfront. In the top sketch, the fascia is in the wrong location and is not proportionate to the shopfront design. (Sketched from archive drawings).

Before

A range of shops contained in a single building should apply a coherent shopfront design. (Sketched from archive drawings).

Before

The fascia in the top sketch has been extended to conceal a lowered false ceiling. The bottom sketch illustrates an appropriate design in keeping with the character of the building. (Sketched from archive drawings).

Before

After

After

After

SG04 Shopfronts November 2015
5. Design Guidance

The top sketch shows a range of different modern interventions. The large and dominant fascia is not in keeping with the building. The bottom sketch reflects a period style traditional frontage, appropriate in design and materials in relation to the host building.

(Hypothetical sketch from archive drawings).

The original fascia board is evident underneath the modern signboard. In this case a simple uncluttered shopfront can be uncovered.

(Sketched from archive drawings).

The installation of roller shutters, in the top sketch, is not in keeping with the design and age of the parent building. Shopfronts with less clutter provide a more aesthetically pleasing design.

(Sketched from archive drawings).

The top sketch shows a range of different modern interventions. The large and dominant fascia is not in keeping with the building. The bottom sketch reflects a period style traditional frontage, appropriate in design and materials in relation to the host building.

(Hypothetical sketch from archive drawings).
5. Design Guidance

**Illumination of Shopfronts**

5.9 Projecting illuminated box fascias are not acceptable as they generally obscure the original fascia underneath and as they project beyond the original building line of the building in a bulky and inappropriate manner.

5.10 Where exterior lighting proposals apply to the upper storeys of a building, owners, developers and their agents are advised to consult with the Planning Authority to establish and agree lighting design principles; lighting design requires an individual approach for each building to ensure that the intrinsic architectural character of the building and streetscape are protected and enhanced. Full information on the lighting scheme including detailed drawings and specifications of proposed light fittings is required to be submitted to the council together with site trials to test proposals prior to full implementation.

An Edwardian shopfront with a modern illuminated fascia board, which is not in keeping with the original shopfront design. The original fascia will be located underneath.

© Crown Copyright, Historic Scotland

Interior shopfront lighting provides light onto the streetscape.

External spotlights and trough light fittings are discouraged as they disrupt the integrity of the shop front design and are deemed to represent clutter.
Blinds and Canopies

5.11 Awnings and canopies are a feature of some traditional shopfronts where they were fitted to provide shade and protection for the goods on display. The introduction of new blinds or awnings will only be acceptable where there is either historic precedent, i.e. records show that the original design incorporated these features, or where the proposed fittings are required for functional purposes and where they are retractable with a fully recessed housing springing directly from below the fascia.

Where remnants of original blinds and canopies survive, they should be restored to working use to match the original design, using traditional fixtures and fittings. These are examples of blinds and canopies.
5. Design Guidance

Ventilation

5.12 Ventilation was often necessary in traditional shops to provide air flow to create a suitable interior environment for perishable goods such as food; designed as an integral part of the shopfront, they include panels below window heads, hopper fanlights above entrance doors, grilles below the stall riser and in rarer cases, opening windows.

In many cases, ventilation features are decorative.
5. Design Guidance

Security Measures

5.13 The incorporation of exterior security measures, often related to the protection of retail premises outwith normal shopping hours, should be carefully considered and sensitively designed to complement the style of the shop front; fixtures and fittings should be located as inconspicuously as possible. In recessed doorways, removable or foldable decorative gates may be acceptable as a means of preventing anti-social behaviour or littering. Ornamental grilles protect goods located behind shop windows.

5.14 Solid roller shutters over shop windows and doorways are not acceptable in any case as they deaden rather than animate the streetscape outside shopping hours; they often incorporate clumsy box fittings attached to house various mechanisms and fixings. In some cases internally fixed, open mesh style metal shutters may be acceptable, providing full constructional details are submitted to and accepted by the local council.

Burglar and fire alarm boxes should be carefully located in as inconspicuous a position as possible. This image illustrates bad practice.

Decorative security gates can add detail and attractive appearance.

Interior open mesh style shutters may be acceptable in some cases.
5. Design Guidance

ATM’s

5.15 Modern cash dispensing machines fitted onto or through shopfronts should be carefully located to avoid obscuring architectural features or disrupting the architectural integrity of the design.

Impact of Internal False Ceilings on Shopfronts

5.16 The installation of false or lowered ceilings should be carefully designed to avoid disrupting the external appearance of shopfronts; standard solutions which are acceptable include terminating the ceiling well back from the glazed frontage with either a stepped or angled alignment - see sketches above. In some cases, it may be acceptable for false ceilings to abut the transom of the upper window frame, providing the glazing in the upper window area is opaque. Deepening of the original fascia to obscure false ceilings is not acceptable.

Signage

General Principles

5.17 For the purposes of this guidance, signage includes fixtures and fittings associated with advertising the shop name and goods or services available, often incorporating applied or hand-painted lettering; all of the above are located at various locations on a shop frontage.

5.18 In every case, over-sized and over dominant signage will be resisted. Graphic styles applied to lettering and other signage should be linked to the architectural style and period of the building. Corporate house styles and motifs/logos will only be permitted where they are deemed to be sensitively designed to suit the design of the shop front in question.

Badly designed and poorly located signage which obstructs architectural detailing detracts from the design quality of contemporary shopfronts and adversely impacts on the special character and appearance of traditional shopfronts. © Crown Copyright, Historic Scotland
Design Guidance

In cases of retail or commercial units in upper storeys of buildings, signage discreetly applied to window blinds or etched on window glazing may be permitted depending on design, scale and location.

Decorative historic cast iron signage.

Design of fascia signage reflects individuality of two shops on the same building.

A traditional historic projecting sign. The pestle and mortar was once the sign of chemists and is still in common use.
5. Design Guidance

Signage on Contemporary Shop Fronts

5.19 Signage on contemporary shopfronts should be located and designed to complement and enhance the architectural design and materials of the property.

5.20 It should be noted that signage on listed buildings and in conservation areas may require statutory consents - see Section 6 of this guidance for advice.

5.21 Fascia signage of traditional appearance using hand painted or other non-illuminated lettering is preferred.

5.22 Lettering or logos should be no larger than two thirds the depth of the original fascia.

5.23 Surviving original signage relating, for example, to a previous historic use of the building should be preserved in situ whenever possible. In some particular types of historic shops, advertising took the form of decorative hanging signs and mosaic tiles in entrance area walls and floor platts.

5.24 Where glazed areas, such as fanlights over doors, side windows, clerestorey and main front facing windows to shop fronts are agreed as being suitable for signage, etched or laser cut applied lettering which is designed and manufactured to resemble traditional acid etched lettering will be encouraged.

5.25 Any proposed projecting signs should be no larger than 500 x 500 mm with width no greater than 100mm; all elements including any brackets or other integral fixtures and fittings, should be designed to match the design and detailing of the original building.

5.26 Banners and other large scale advertisement displays including new flagpoles should not be located on the front elevations of buildings located in conservation areas or on listed buildings as they have a detrimental impact on the amenity and appearance of these historic buildings and places.

5.27 Internally illuminated box section fascias or other applied panels over existing fascias will be discouraged, particularly where proportions, materials and colours are deemed to conflict with the character of the building or area or where levels of illumination detract from local amenity.

Signage on Traditional Shop Fronts

5.20 It should be noted that signage on listed buildings and in conservation areas may require statutory consents - see Section 6 of this guidance for advice.

5.21 Fascia signage of traditional appearance using hand painted or other non-illuminated lettering is preferred.

5.22 Lettering or logos should be no larger than two thirds the depth of the original fascia.

5.23 Surviving original signage relating, for example, to a previous historic use of the building should be preserved in situ whenever possible. In some particular types of historic shops, advertising took the form of decorative hanging signs and mosaic tiles in entrance area walls and floor platts.

5.24 Where glazed areas, such as fanlights over doors, side windows, clerestorey and main front facing windows to shop fronts are agreed as being suitable for signage, etched or laser cut applied lettering which is designed and manufactured to resemble traditional acid etched lettering will be encouraged.

5.25 Any proposed projecting signs should be no larger than 500 x 500 mm with width no greater than 100mm; all elements including any brackets or other integral fixtures and fittings, should be designed to match the design and detailing of the original building.

5.26 Banners and other large scale advertisement displays including new flagpoles should not be located on the front elevations of buildings located in conservation areas or on listed buildings as they have a detrimental impact on the amenity and appearance of these historic buildings and places.

5.27 Internally illuminated box section fascias or other applied panels over existing fascias will be discouraged, particularly where proportions, materials and colours are deemed to conflict with the character of the building or area or where levels of illumination detract from local amenity.
5. Design Guidance

Traditional etched lettering may be applied to fanlights over doors, side windows, clerestorey and main front facing windows.

This historic decorative mosaic wall mural was the corporate image of the Buttercup Dairy Company. The Fruit Basket, Denny.

Traditional hand painted signage.

Sensitively designed hanging signs enhance a traditional streetscape.

6.1 In the case of shops located in listed buildings and in unlisted properties in designated conservation areas (see Section 3.0 for further information on statutory consent process), Falkirk Council will encourage the repair or reinstatement of the original shop front design incorporating traditional detailing, fixtures, fittings and materials as far as is practicable.

6.2 On listed buildings and in conservation areas, modern fittings such as security and fire alarms, ventilation and other services fittings such as ventilation and boiler flues will not be permitted on street facing shop facades.

6.3 Contemporary shopfronts in designated conservation areas and listed buildings may be acceptable, if design, proportions and materials are appropriate to the host building.

6.4 Colour schemes require to be carefully considered. It is likely that corporate colours can be adapted to suit the requirements of the conservation area or listed building; colour changes in the conservation areas will require planning permission.

6.5 Within conservation areas and on listed buildings, signage on the main fascia board should be limited to three options; individually cut letters placed on locaters or directly onto the fascia board, vinyl lettering applied directly to the fascia board to give the impression of hand painted lettering directly painted onto the fascia board or traditional hand painted or gilded lettering. It should be noted that all three options make reference to the original fascia board, and in no case should an additional board of any material be placed on-top of the original fascia board.

6.6 In terms of illumination, it is preferable that signage is not illuminated, given the level of street lighting in historic town centres which is generally supplemented by escaping light from large windows. Where illumination is acceptable, it should be in the form of LED “halo” lighting around individually cut lettering. No other light sources should be placed on the fascia board.

6.7 Main and upper windows should not be fully covered with advertisements; any agreed text or advertisements placed on windows should occupy no-more than around 25% of the glazing, comprising vinyl applied material with a traditional acid etched appearance. Windows should in the majority of cases remain clear to ensure an active frontage is maintained onto the street.

6.8 Shopfronts in listed buildings and conservation areas should not incorporate roller shutters, although removable gates and grilles that can be put in-place when the shop or building is not in use may be acceptable. Solid roller shutters are not acceptable.

Example of signage with acid etched appearance.

Banners and other large scale advertisement displays including new flagpoles should not be located on the front elevations of buildings located in conservation areas or on listed buildings as they have a detrimental impact on the amenity and appearance of these historic buildings and places.

Security

Example of signage with acid etched appearance.
7. Townscape Heritage Initiative and Grant Aid

7.1 Within a designated area of the Falkirk Town Centre Conservation Area - see adjacent map - a Townscape Heritage Initiative (THI) and a Conservation Area Regeneration Scheme (CARS) are in operation from 2013 until 2018; one of its aims is to improve the appearance of shopfronts via The Traditional Shop Front Improvement Scheme which offers grant funding for eligible works, including restoration of original designs and detailing.

7.2 Initially, this funding will be targeted at certain priority shopfronts in strategic locations in order to achieve maximum impact in enhancing the Conservation Area.

7.3 These THI funded projects will follow design principles included in this Guidance, by aiming to restore traditional shopfronts to their original design and appearance.

7.4 Where a shopfront is not in one of the targeted properties, the design principles set out in this guidance still applies. Even small improvements, carried out incrementally over time to a shopfront, will lead to enhancement of the character and appearance of a property and its immediate surroundings.

A previous THI (2006 to 2011) within the Falkirk Council Area for an area within the Bo'ness Town Centre Conservation Area contributed to the regeneration of the town centre by restoring buildings and shop frontages in the area.

Map of the THI area and its priority buildings. The THI information pack can be found at http://falkirkthi.com/get-informed/.
Appendix 1 : Colours Guide

General Principles

8.1 In traditional shopfronts, original paint colours can be revealed during shopfront refurbishment works; historic colours may inform decisions on new colour schemes if deemed appropriate by the Planning Authority.

8.2 Unpainted natural stonework and other unpainted high quality materials such as brickwork, marble and granite integrated with or adjacent to a shopfront should generally not be painted.

8.3 Fascia signage and lettering should respect and complement the original historic shopfronts in colour. Subtle colour contrast between lettering and background fascia can be highly effective.

8.4 Fascia signage and lettering should respect and complement the original historic shopfronts in colour. Subtle colour contrast between lettering and background fascia can be highly effective. Metallic gold paint can be applied to reflect a historic fashion for gilded lettering that was associated with prestigious shops.

8.5 Suggested pairings offering tonal variations of colours within the same colour ‘family’ include:
- BS 08B229, Bitter Chocolate with BS 08B15, Magnolia
- BS 18C31, Fathom Blue with BS 18C31, Ice Blue
- BS 08B29, Bitter Chocolate
- BS 20C40, Duchess Blue

8.6 It should be noted that many paint manufacturers now produce proprietary ranges which include colours outwith the British Standard Reference Numbering System. Alternative colours not specified above may be acceptable providing they are deemed to meet the general principles of this guidance.

Colour Changes to Existing Shopfronts and Statutory Consents

8.8 Proposals for re-painting existing shopfronts in the Falkirk Council area should be discussed with the Planning Authority, who will advise what planning permission may be required. See Section 3 for contact details.

8.9 In some cases, like-for-like repainting of an existing colour scheme may be deemed to represent repair and maintenance work; in this case, this work would not require applications for statutory consent, providing the application of colour is not for the intention of advertisement.

Metallic gold paint can be applied to reflect a historic fashion for cut and gilded lettering that was associated with prestigious shops, as illustrated above.

Appendix 1: Colours Guide

A wide range of colours in matching shop front designs in one building or street is discouraged; co-ordinated colour schemes are encouraged.

An exterior colour scheme which complements the architectural style of a shop front or its host building will enhance the appearance of the streetscape. © Courtesy of Lindsay Lennie, Historic Shopfront Conservation

Corporate and business colour schemes will be deemed to be secondary to what the Planning Authority considers to be an appropriate design and colour scheme for the building form, architectural detailing and street context.

Many traditional shopfronts used two colours, one highlight colour picking out the decorative architectural detailing of the frontage.
9.1 Choice of external materials should be governed by durability as well as appearance; some materials such as upvc, coated foam boards and aluminium have shorter life spans; some materials dull quickly and fail to retain their original appearance over time. High quality natural materials such as timber, sandstones and granites can be easily maintained and can endure over long life spans.

Vitrolite glass tiling was commonly used in the Art Deco period.

Different materials were popular in shopfronts over different periods; while timber, stone and cast iron featured in the Victorian era, polished granite, Vitrolite and marble featured in the inter-war years.
Appendix 3: Useful Contacts

Information on Planning Permission, Permitted Development, Listed Building and Conservation Area control can be obtained from:

Development Management
