

# Grangemouth Future Industry Board 12 Month Priorities (February 2021-2022)

## Board Functionality

Support enhanced engagement between key businesses and the multiple public sector organisations, including:

- Strengthened alignment between the relevant Scottish public sector organisations, agreeing formal terms of reference and ways of working through GFIB, to ensure that we can better respond to issues at Grangemouth and progress new opportunities for development bilaterally.
- Prepare a Delivery Map of upcoming opportunities to indicate where the Board can best focus its influence.

## Net Zero

- Establish a process and set the groundwork to allow for the development of a credible, ambitious and coherent net-zero transition plan.
  - Ensure that Grangemouth is supported to take its place in the Scottish Net-Zero Routemap (SNZR) (NECCUS).
    - Undertake a feasibility study to understand the potential for at scale-hydrogen opportunities.

### Strategic Investment

Effective engagement with industry on strategic investment activities and opportunities.

Engagement with all relevant policy leads within Scottish Government to ensure that the export and inward investment plans build in footholds for Grangemouth interests to be realised (important with IIP having a priority theme on Just Transition).

### Infrastructure

Begin work to scope out opportunities for Grangemouth to capitalise and diversify products in line with the transition to low carbon transportation.

Scope up a pipeline of infrastructure that will be necessary for i) our transition to net zero ii) efficient/modern industrial activity

Explore and determine a strategy for the Grangemouth Flood Protection Scheme

### Project Development

Begin work to scope out a pipeline of opportunities to create, sustain and develop jobs at the Grangemouth industrial cluster, including skills development, in line with a Just Transition.

Support Colleagues in the delivery of the Falkirk Growth Deal to maximise benefits at the Grangemouth cluster.

Undertake a feasibility study to understand the potential for at scale-hydrogen opportunities.

### Grangemouth Regulatory Hub

Start to build an integrated environmental regulatory hub: a national centre of excellence

Strengthened environmental partnerships: a collaborative regional transition framework.

Integrated environment and land use management hierarchy: a priorities, place based, transition investment plan.

Understand what Free Port status could change for the cluster and its regulatory environment.

### Resilience Planning

Ensure that the Scottish public sector is joined-up and understands its role in resilience planning at Grangemouth.

Planning to ensure all bodies can mobilise effectively where necessary in the event of an incident, acknowledging devolved competency.

Consider the effects of Covid-19 and EU Exit on Resilience Planning
