Notes

1. The information refers to cases which have been confirmed by the National Lyme Borreliosis Testing Service at Raigmore (it will not include reports that have not been forwarded on to the Raigmore laboratory from local diagnostic laboratories).

2. Please note that these laboratory reports are based on health board of residence and do not necessarily reflect where the infection was acquired. Laboratory reports only capture a proportion of Lyme disease cases as many will be treated based on clinical presentation rather than laboratory confirmation
