To: Mr. Ronald Smith,  
Fish Health Inspectorate Technical Manager,  
Marine Laboratory, 375 Victoria Road,  
Aberdeen, AB11 9DB.

**Satisfactory Measures in Place for the Prevention, Control and Reduction of Parasites.**

In response to Fish Health Inspectorate email received 28 September 2017 Grieg Seafood Shetland Ltd. has decided to implement the following plan aimed at reducing weekly average adult female sea lice numbers on two sites: Coledeep (FS0489) and East Of Papa Little (FS1278) to an acceptable level.

Coledeep: harvest started 01.10.2017 to reduce biomass and number of holding units on site. To reduce lice level site will be treated with fresh water starting WK41 – estimated finishing time is WK 43.

East Of Papa Little: harvest (top grading) will start WK 41 to allow lower biomasses for further treatments. Fresh water treatment will start WK 43 and should be finished by WK 45.

Please note that given estimated start/finish timescale might change due to weather conditions or other circumstances. With above control measures Grieg Seafood Shetland Ltd. is expecting high treatment efficacy.

Signed: [REDACTED]
