**QUESTIONS FROM GINA DAVIDSON**

4. Why does the research not show the Swedish co-hort research which, as far as I can tell, is the only nationwide examination of offending rates which includes transgender people? <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0016885> This research suggests that offending rates by MtF transgender people are the same as men. Followed by FtM transgender people, and then women.

A. The Scottish Government is aware that the author of this article [Dr. Cecilia Dhejne] has advised that it should not be misinterpreted. The link above says “Transsexual individuals were at increased risk of being convicted for any crime or violent crime after sex reassignment ([Table 2](#)); this was, however, only significant in the group who underwent sex reassignment before 1989.” In this article, [https://www.transadvocate.com/fact-check-study-shows-transition-makes-trans-people-suicidal\\_n\\_15483.htm](https://www.transadvocate.com/fact-check-study-shows-transition-makes-trans-people-suicidal_n_15483.htm) the author is quoted as saying “This means that for the 1989 to 2003 group, we did not find a male pattern of criminality.”
