

Annex A: Background and Information Requested

Document and information for release

Background and information requested:

More up to date information is available from [PHS' monitoring report](#).

In our survey of ADPs, we asked: **“In 2019/20, how many individual residential rehabilitation placements were funded (either directly or through partner organisations) using Scottish Government alcohol/drug funding allocated to your ADP?”**

We reported in the [ADP Pathways Report](#) that **“In 2019/20, an estimated minimum total of 300 residential rehab placements for the treatment of drugs and/or alcohol were funded by ADPs (either directly or through partner organisations), with 162 being for drugs and alcohol dependencies, and 138 for alcohol dependency alone.** The majority (61%) of these were for placements within the ADP area, 26% were within the health board area, 7% were to specialist facilities for complex needs, and 5% to placements outwith the local ADP or health board area. A number of ADPs mentioned that funding for residential rehabilitation placements was controlled by Health and Social Care Partnerships (HSCPs), NHS Board or Local Authority budgets and, as such, were not able to report on how many placements were funded through this route in their ADP area. The estimates presented are therefore likely to be an under-representation of the number of the total statutory funded residential rehab placements.”

The raw data for each ADP is reported in **Table 1** below;

Table 1 - Residential Rehabilitation Placements funded (either directly or through partner organisations) using Scottish Government alcohol/drug funding allocated to ADPs in 2019/20

ADP	Alcohol Only	Drugs (inc. Alcohol)	Total

We reported that: **“The majority of ADPs (59%) reported that agencies, other than the Scottish government funded residential rehab placements in their area.** Agencies that funded placements included social work (in 38% of ADP areas), NHS boards (in 31% 3 A significant number of ADPs we not able to provide an accurate estimate for funded placements in their area and so estimates should only be used to infer a minimum number of placements. 9 of ADP areas), rehab facilities (in 14% of ADP areas) , and other charitable organisations (in 4% of ADP areas)”

Based on this data, and on the data provided in the ADP’s Annual Reports for 2019/20, we reported that **“A minority of ADPs (N=7; 23%) reported either funding no referrals to residential rehab and making no significant investment in residential rehab services in 2019/20.** In addition to these, a further two ADPs reported having no specific pathway in place for individuals to enter residential

rehab, despite funding a small number of placements in that year. This indicates that 9 ADP areas have underdeveloped pathways to residential rehab.”
