

Latest Results

In 2019 Quarter 2, labour productivity in Scotland, measured by output per hour worked, increased by 1.3% compared to the same quarter last year.

Compared to the previous quarter, labour productivity is estimated to have grown by 0.2% in 2019 Quarter 2, following growth of 0.7% in the previous quarter.

Growth in output per hour worked

What is driving recent changes in productivity?

Productivity can be simply broken down into growth in output (GVA) *minus* growth in hours worked. Therefore, when output grows faster than hours, productivity increases.

Between 2018 Q2 and 2019 Q2, output per hour increased by 1.3% due to a combination of rising GVA (0.6%) and a fall in the total number of hours worked (-0.7%).

Components of productivity growth

Longer Term Trends

The financial crisis and recession in 2008 had a long term impact on the economy.

From 1998 to 2007, output per hour worked increased by 1.5% per year on average. Since 2007, this average rate has slowed to 1.0% per year.

In 2018, total hours worked remained below 2007 levels.
