** Denominator = population in age group

*** Denominator = Economically active population in age group (where economically active is defined as those in employment plus those who are unemployed).

Note on data sources: The Labour Force Survey (LFS) is a survey of households collected and published by the Office for National Statistics (ONS). Further information on reliability can be accessed in the ONS publication at: <https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/methodologies/measuringandreportingreliabilityoflabourforcesurveyandannualpopulationsurveyestimates>

The Annual Population Survey estimates are classified as National Statistics as they are based on a larger sample size, but are not as current as LFS estimates. Regional estimates for the unemployment rate maybe quite volatile, which needs to be allowed for when considering the pattern of change over time and sample sizes are also smaller for sub groups such as 16-24 year olds which can also affect volatility. Sampling variability information is published at: <https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/datasets/samplingvariabilityandrevisionsummaryforregionallabourmarketstatistics02>

Source: Labour Force Survey, ONS

Note on data sources: The Labour Force Survey (LFS) is a survey of households collected and published by the Office for National Statistics (ONS). Further information on reliability can be accessed in the ONS publication at: <https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/methodologies/measuringandreportingreliabilityoflabourforcesurveyandannualpopulationurveyestimates>

The Annual Population Survey estimates are classified as National Statistics as they are based on a larger sample size, but are not as current as LFS estimates. Regional estimates for the unemployment rate maybe quite volatile, which needs to be allowed for when considering the pattern of change over time and sample sizes are also smaller for sub groups such as 16-24 year olds which can also affect volatility. Sampling variability information is published at: <https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/datasets/samplingvariabilityandrevisionsummaryforregionallabourmarketstatistics02>

Questions used to derive current disability status of a person were changed in the April-June 2013 dataset. Subsequent datasets are therefore not directly comparable to equivalent periods in earlier years. See Notes (p36) for further information.

Note on data sources: Labour market estimates for employment, unemployment or inactivity by age from the LFS are classified as expert error for some estimates included in the series (such as estimates for those aged 16/17). However, the LFS data are more timely and up-to-date estimates are classified as National Statistics as they are based on a larger sample size, but are not as current as LFS estimates.

Notes:

1 - Levels and rates based on working population aged 16 and over

2 - Underemployment rate based on those in employment (excludes those who did not respond to underemployment questions)

3 - Underemployment includes:

- those looking for more hours in their current role at same rate of pay
- those looking for an additional job
- those looking for a replacement job with more hours than their current job.

[Back to Contents page](#)

Alternative Claimant Count

The Alternative Claimant Count measures the number of people claiming unemployment-related benefits. Previously, the Claimant Count was simply the number of people claiming Jobseeker's Allowance.

- Since the introduction of Universal Credit in April 2013, Universal Credit claimants who meet the 'Searching for Work' conditionality were added to the overall Claimant Count. As more people are therefore brought within the coverage of the Claimant Count, total numbers are set to rise, irrespective of economic performance.
- As a result, ONS withdrew the Claimant Count from Labour Market Statistics bulletins, stating that it was no longer a reliable economic indicator and could be a misleading representation of changes in the labour market. The Alternative Claimant Count is intended to provide a consistent claimant unemployment series and thus a better indicator of local labour market change over time.
- The new Alternative Claimant Count is not directly comparable to the Claimant Count figures previously published.

Statistics for this new measure are published quarterly by the Department for Work and Pensions (DWP). They are available by calendar month at national and local authority level and can be broken down by gender, age group and type of benefit claimed. Tables C1 to C5 show experimental alternative claimant count data published by DWP on the 21st January 2020. The information and further background to this measure can be found at the following link

<https://www.gov.uk/government/publications/alternative-claimant-count-statistics-january-2013-to-november-2019/alternative-claimant-count-statistics-january-2013-to-november-2019#regional-level>

This information will be updated quarterly.

Measures of disability

In the April-June 2013 dataset, and subsequent datasets, questions used to derive current disability status of a person were changed. Estimates are now based on the core definition of disability under the Equality Act 2010, as specified in the Government Statistical Service (GSS) Harmonised Standards for Questions on disability.

- The definition includes people with a health condition or illness lasting 12 months or more that reduces their ability to carry out day-to-day activities.
- The definition excludes certain non-core groups covered by the Equality Act, such as those with progressive or past conditions that do not currently limit their activities, and conditions that only limit their activities without medication or treatment.
- Respondents are now asked to take into account any medication that they are currently taking when previously they were asked to consider their day-to-day activities without the use of medication.

The introduction of this new definition has created a discontinuity in the series and estimates are not directly comparable with earlier periods
