** Denominator = population in age group

*** Denominator = Economically active population in age group (where economically active is defined as those in employment plus those who are unemployed).

Note on data sources: The Labour Force Survey (LFS) is a survey of households collected and published by the Office for National Statistics (ONS). Further information on reliability can be accessed in the ONS publication at: <https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/methodologies/measuringandreportingreliabilityoflabourforcesurveyandannualpopulationsurveyestimates>

The Annual Population Survey estimates are classified as National Statistics as they are based on a larger sample size, but are not as current as LFS estimates. Regional estimates for the unemployment rate maybe quite volatile, which needs to be allowed for when considering the pattern of change over time and sample sizes are also smaller for sub groups such as 16-24 year olds which can also affect volatility. Sampling variability information is published at: <https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/datasets/samplingvariabilityandrevisionsummaryforregionallabourmarketstatistics02>

Source: Labour Force Survey, ONS

Note on data sources: The Labour Force Survey (LFS) is a survey of households collected and published by the Office for National Statistics (ONS). Further information on reliability can be accessed in the ONS publication at: <https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/methodologies/measuringandreportingreliabilityoflabourforcesurveyandannualpopulationurveyestimates>

The Annual Population Survey estimates are classified as National Statistics as they are based on a larger sample size, but are not as current as LFS estimates. Regional estimates for the unemployment rate maybe quite volatile, which needs to be allowed for when considering the pattern of change over time and sample sizes are also smaller for sub groups such as 16-24 year olds which can also affect volatility. Sampling variability information is published at: <https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/datasets/samplingvariabilityandrevisionsummaryforregionallabourmarketstatistics02>

Questions used to derive current disability status of a person were changed in the April-June 2013 dataset. Subsequent datasets are therefore not directly comparable to equivalent periods in earlier years. See Notes (p36) for further information.

Note on data sources: Labour market estimates for employment, unemployment or inactivity by age from the LFS are classified as expert error for some estimates included in the series (such as estimates for those aged 16/17). However, the LFS data are more timely and up to date estimates are classified as National Statistics as they are based on a larger sample size, but are not as current as LFS estimates.

Notes:

1 - Levels and rates based on working population aged 16 and over

2 - Underemployment rate based on those in employment (excludes those who did not respond to underemployment questions)

3 - Underemployment includes:

- those looking for more hours in their current role at same rate of pay
- those looking for an additional job
- those looking for a replacement job with more hours than their current job.

UK	3.5	0.0 ↔	0.5 ↑	-1.1 ↓

Source: Claimant Count, ONS (seasonally adjusted)

Notes:

1. Levels rounded to nearest 1000.
2. The Claimant Count rate is calculated as a proportion of the resident population, aged 16-64, based on the Mid-year population estimates for 2018.
3. Claimant count rates are workplace based.

ONS have removed the Claimant Count series from the UK and Regional Statistical Bulletins as it may now be providing a misleading representation of the UK labour market. Claimant Count data continues to be available as datasets on the ONS website and via NOMIS. See Notes (page 37) for further information.

Notes:

1. Levels rounded to nearest 5.
2. The Claimant Count rate is calculated as a proportion of the resident population, aged 16-64, based on the Mid-year population estimates for 2018.

ONS have removed the Claimant Count series from the UK and Regional Statistical Bulletins as it may now be providing a misleading representation of the UK labour market. Claimant Count data continues to be available as datasets on the ONS website and via NOMIS. **See Notes (page 37) for further information.**

Table 6.3: 16-24 Claimant Count levels and rates, Scotland and UK (Experimental data)

Claimant Count data continues to be available as datasets on the ONS website and via NOMIS. See Notes (page 37) for further information.

Alternative Claimant Count

The Alternative Claimant Count measures the number of people claiming unemployment-related benefits. Previously, the Claimant Count was simply the number of people claiming Jobseeker's Allowance.

- Since the introduction of Universal Credit in April 2013, Universal Credit claimants who meet the 'Searching for Work' conditionality have been added to overall Claimant Count figures. By bringing more people within the coverage of the Claimant Count, total numbers may rise irrespective of economic performance.
- ONS has withdrawn Claimant Count data from Labour Market Statistics bulletins, stating that it was no longer a reliable economic indicator and could be a misleading representation of changes in the labour market. The Alternative Claimant Count is intended to provide a consistent claimant unemployment series and thus a better indicator of local labour market change over time.
- The new Alternative Claimant Count is not directly comparable to the Claimant Count figures previously published.

Statistics for this new measure are published quarterly by the Department for Work and Pensions (DWP). They are available by calendar month at national and local authority level and can be broken down by gender, age group and type of benefit claimed. Tables C1 to C5 show experimental Alternative Claimant Count data published by DWP and are updated quarterly. The most recent data was published on 21 April 2020. Further information on this measure can be found at the following link:

<https://www.gov.uk/government/statistics/alternative-claimant-count-statistics-january-2013-to-february-2020>

Claimant Count

The Claimant Count measures the number of people claiming benefit principally for the reason of being unemployed:

- between January 1971 (when comparable estimates start) and September 1996, it is an estimate of the number of people who would have claimed unemployment-related benefits if Jobseeker's Allowance had existed at that time.
- between October 1996 and April 2013, the Claimant Count is a count of the number of people claiming Jobseeker's Allowance (JSA).
- between May 2013 and October 2013, the Claimant Count includes all claimants of Universal Credit (including those who were in work) as well as all JSA claimants
- from November 2013, the Claimant Count includes all out of work Universal Credit claimants as well as all JSA claimants .
- From April 2015 onwards the claimant count includes those claimants of Universal Credit who are required to search for work, i.e. within the Searching for Work conditionality regime as defined by the Department for Work & Pensions as well as all JSA claimants

The information for March 2020 is for number of claimants on the 12th of March 2020.

Measures of disability

In the April-June 2013 dataset, and subsequent datasets, questions used to derive current disability status of a person were changed. Estimates are now based on the core definition of disability under the Equality Act 2010, as specified in the Government Statistical Service (GSS) Harmonised Standards for Questions on disability.

- The definition includes people with a health condition or illness lasting 12 months or more that reduces their ability to carry out day-to-day activities.
- The definition excludes certain non-core groups covered by the Equality Act, such as those with progressive or past conditions that do not currently limit their activities, and conditions that only limit their activities without medication or treatment.
- Respondents are now asked to take into account any medication that they are currently taking when previously they were asked to consider their day-to-day activities without the use of medication.

The introduction of this new definition has created a discontinuity in the series and estimates are not directly comparable with earlier periods
