## Scottish Consumer Sentiment Indicator

Quarter 1 2022

20 April 2022

### 1. Main Findings

In Q1 2022, the Scottish Consumer Sentiment Indicator stood at 0.6. Compared to Q4 2021, the overall (composite) indicator decreased by 4.4 points, implying a weakening in sentiment over the period. The composite index remains significantly improved from the series lows recorded in 2020. However, the ongoing economic and financial challenges that are being faced by households have intensified over the first quarter of 2022 and the composite index as a result has fallen. On a monthly basis, the composite indicator recorded its second largest fall in March, smaller only than the fall seen at the beginning of the pandemic.

### 2. Important information about this release

The Scottish Consumer Sentiment Indicator is a composite measure of consumer sentiment in Scotland based on a quarterly survey of households' current sentiment and future expectations of: Scottish economic performance, security of households' financial position, and attitudes to spending money. Excel tables of the results are available online alongside the publication, and include a monthly breakdown of the results.

The Scottish Consumer Sentiment Indicator is an experimental statistical release. It remains in development and we welcome views on the content, style and presentation.

The latest survey for Q1 2022 was conducted between 5 January and 27 March 2022. The indicator represents the balance of respondents who report that consumer sentiment is positive/negative.

### 3. Results Breakdown

#### Composite Indicator

In Q1 2022, the composite Consumer Sentiment Indicator was 0.6 and decreased by 4.4 points compared to Q4 2021, indicating that consumer sentiment has weakened over the quarter. Over the quarter, the largest changes have been observed in household spend and finance indicators. In terms of the current indicators, the current view of the economy was positive while both household finances and attitude to spending were negative. Economy and household finances expectation indicators both remained positive.

Results	Net Balances		Change between Q4 2021 and Q1 2022
	Latest Quarter (Q1 2022)	Previous Quarter (Q4 2021)	
<b>Consumer Sentiment composite indicator</b>	+0.6	+5.0	-4.4
<b><i>Current indicators</i></b>			
(a) Economy performance	+1.3	-0.5	+1.8
(c) Households' finances	-11.6	-6.0	-5.6
(e) Attitude to spending	-13.9	-6.1	-7.9
<b><i>Expectation indicators</i></b>			
(b) Economy performance - next 12 months	+26.5	+28.3	-1.8
(d) Households' finances - next 12 months	+0.9	+9.5	-8.5
<small>Note: The consumer sentiment indicator score is the average of the net balances for each question topic. The net balance is the difference between the percentage of respondents reporting an improvement and those reporting a weakening. Scores are subject to rounding therefore differences in scores over the quarter may not sum.</small>			

#### Economic Performance

The Economic Performance indicators reflect how respondents consider Scotland's economy is currently performing relative to 12 months earlier and how they expect it will be performing in 12 months' time relative to current performance.

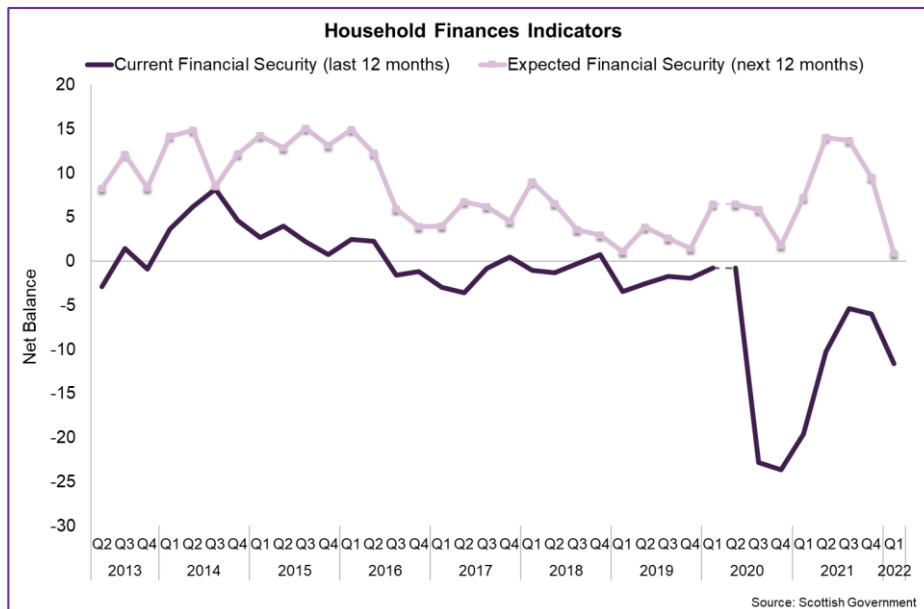

The indicator for Scotland’s current economic performance in Q1 2022 was 1.3, meaning that the balance of respondents consider the economy is performing better than 12 months ago. The indicator increased by 1.8 points over the quarter, and is positive for the first time since Q2 2016.

The indicator for Scotland’s expected economic performance was 26.5, meaning that the balance of respondents expect economic performance to be better in 12 months’ time. The indicator decreased by 1.8 points over the quarter meaning that sentiment regarding the economic outlook has weakened over the quarter, however remains significantly stronger than prior to the pandemic, in part reflecting the exceptional economic circumstances in which the survey is currently being undertaken.

### Household Finances

The Household Finances indicators reflect how secure respondents consider their current household financial position to be relative to 12 months earlier and how secure they expect it to be in 12 months’ time relative to its current position.

The indicator for current security of households’ financial position was -11.6 in Q1 2022 implying that the balance of respondents consider their current household financial security to be in a worse position than 12 months ago. The indicator decreased by 5.6 points over the quarter indicating a reduction in household sentiment regarding their financial security.

The indicator for expected security of households’ financial position has remained positive in Q1 2022 at 0.9. This implies that the balance of respondents expect their households’ financial security to improve in 12 months’ time. However, sentiment regarding the outlook for household financial security weakened significantly over the quarter, with the indicator decreasing by 8.5 points.

### Household Spending

The Household Spending indicator reflects how relaxed respondents currently feel about spending money relative to 12 months earlier.

The indicator for household attitude to spending was -13.9 in Q1 2022 reflecting that the balance of respondents are less relaxed about spending money than 12 months ago. The indicator decreased by 7.9 points over the quarter, indicating a weakening in sentiment towards spending and is consistent with the fall in security of household finances indicators.

#### 4. Understanding the Scottish Consumer Sentiment Indicator

The Scottish Consumer Sentiment Indicator has been compiled quarterly since Q2 2013, initially based on a face-to-face survey of approximately 2,250 adults in Scotland. As a result of the coronavirus pandemic, the Scottish Government has paused all its face-to-face surveys until further notice. As a result, the consumer sentiment survey was paused in March 2020 and restarted as an online survey in June 2020 with a quarterly sample of c. 3,000 adults in Scotland.<sup>1</sup>

The survey asks respondents questions to ascertain whether sentiment has improved, declined or remained unchanged across 5 indicators:

- a. Current Scottish economic performance over the past 12 months;
- b. Expected Scottish economic performance over the next 12 months;
- c. Current security of households' financial position over the past 12 months;
- d. Expected security of households' financial position over the next 12 months;
- e. Current attitude to spending money over the past 12 months.

Indicator scores for each question are presented in the form of net balances. The net balances are calculated by subtracting the percentage of respondents that report a decline in sentiment from the percentage of respondents that report an improvement in

<sup>1</sup> Due to the coronavirus pandemic, data were not collected in the last two weeks of March 2020 and in April and May 2020. Therefore there are no results for Q2 2020 as a whole and in Q1 2020 results are based on 2,129 adults instead of 2,250.

sentiment, excluding respondents that report unchanged sentiment. In each quarter this shows whether the balance of responses is positive, negative or balanced. From this, the composite Consumer Sentiment Indicator score is derived as the unweighted average of the net balances for each of the five indicators.

On a quarterly basis, the distribution of responses to questions and the net balances provide a snapshot of consumer sentiment. The change in net balances between time periods can also show whether sentiment is improving or weakening. Taken together, the latest net balance scores, and the change compared to previous periods, provide an early signal of potential changes in household spending, a key component of Scottish GDP.

This publication is currently classed as experimental statistics. These are defined in the Code of Practice for Statistics as new official statistics undergoing evaluation. These statistics are currently being developed and have been published to involve users and stakeholders in their development, and to build in quality and understanding at an early stage.

## **5. Background Information**

The following supporting documents have been published:

- Excel tables of results, including monthly data.
