

EQUALITY, POVERTY AND SOCIAL SECURITY

Scottish Welfare Fund Statistics: Update to 30 June 2022

Introduction

The Scottish Welfare Fund comprises **Community Care Grants**, which help people to live independently, and **Crisis Grants**, which provide a safety net in a disaster or emergency.

This publication provides information on the Scottish Welfare Fund for the latest quarter, 1 April to 30 June 2022. It also contains information from previous financial years dating back to 1 April 2013, when the scheme started. The next update of this publication, to be released in January 2023, will include applications received in July to October 2022. Disclosure control has been applied to the figures reported here, with all values rounded to the nearest five observations.

The publication includes monthly management information (informal returns) from January 2020 to July 2022, broken down by local authority, for comparison with the Official Statistics and to provide more recent figures that show the impacts of COVID-19 on the Scottish Welfare Fund. Monthly Self-Isolation Support Grant management information broken down by local authority is also included.

A supplementary spreadsheet containing 46 tables and 16 charts has been published. Electronic versions of this document and supplementary tables and charts are available [here](#).

These statistics are being published as experimental statistics. Experimental statistics are defined in the Code of Practice for Official Statistics as "*new official statistics undergoing evaluation. They are published in order to involve users and stakeholders in their development and as a means to build in quality at an early stage.*" These statistics have not yet been assessed by the UK Statistics Authority. They have not been designated as National Statistics. More information on experimental statistics is available from the [Statistics Authority](#).

Summary of main points

From when the Scottish Welfare Fund scheme began on 1 April 2013 until 30 June 2022, **481,330 individual households** have received awards totalling **£355.6 million**. A third of households receiving an award were families with children, while just over half were single person households with no children.

During April to June 2022, local authorities received **21,050 applications for Community Care Grants**, a decrease of 7% compared to April to June 2021. At the same time, local authorities made **12,460 awards**, an increase of 2%, **spending £8.6 million**, a decrease of 1% compared to April to June 2021. The acceptance rate was therefore 54%, four percentage points higher than during April to June 2021. Local authorities received **72,945 Crisis Grant applications** in April to June 2022, an 18% increase compared to April to June 2021. At the same time, local authorities made **47,665 awards, spending £5.9 million**,

increases of 17% and 28% respectively compared to April to June 2021. The acceptance rate was 64%, two percentage points lower than during April to June 2021.

During April to June 2022, 30% of Community Care Grant applications and 14% of awards were repeats, the proportion of repeat applications being unchanged, and the proportion of awards two percentage points lower than April to June 2021 respectively. At the same time, 70% of Crisis Grant applications and 61% of awards were repeats, each three percentage points lower than April to June 2021 respectively.

From April to June 2022, 87% of Community Care Grant applications and 88% of Crisis Grant applications were processed within **target times**.

Local authorities have been **allocated £35.5 million** for Scottish Welfare Fund awards in 2022/23. There was also an estimated underspend of £4.3 million carried forward from 2021/22. Of the estimated total £39.8 million available for awards this year, **£14.5 million (36%) had been spent in the first three months of the financial year**.

Since April 2013, there have been 29,185 **Tier 1 reviews** for Community Care Grants and 38,200 for Crisis Grants. Just under half of decisions have been revised at this stage for both Community Care Grants (47%) and Crisis Grants (43%).

We have included monthly management information on **Self-Isolation Support Grant** applications, awards and expenditure broken down by local authority in **Table 46**. However, comparisons should not be made between the numbers of applications received by local authorities, particularly due to variations in the administrative systems used to apply for the grant.

In previous publications, we highlighted **data quality issues** with the official statistics, and discrepancies between the official statistics and management information. While there are still data quality issues in the official statistics for certain local authorities (described in the [data quality section](#)), the discrepancies between the official statistics and management information have reduced in the last few quarters at Scotland level. There are some discrepancies between monthly management information and quarterly data extracts: for Community Care Grant applications (-3% in the quarterly extract), awards (+2% in the quarterly extract) and expenditure (+5% in quarterly extract); and for Crisis Grant applications (-2% in quarterly extract), awards (+1% in quarterly data) and expenditure (+12% in quarterly data). **Tables 44 and 45** provide Management information to August 2022 for comparison with the official statistics. However, the official statistics provide much more detailed information as well as breakdowns that are not available from the monthly management information and remain the recommended primary source for analysis and commentary.

Applications

From April to June 2022, 93,990 applications to the Scottish Welfare Fund were received (**Table 1**). The majority were for Crisis Grants (72,945, **Table 3**), and a smaller number were for Community Care Grants (21,050, **Table 2**).

There were 1,555 fewer Community Care Grant applications (-7%) than in the same quarter in 2021 (**Table 2, Chart 1**). At local authority level the percentage change in applications varied from a 65% increase in Na h-Eileanan Siar (from 25 to 40 applications) to a 48% decrease in West Dunbartonshire (from 770 to 400 applications). Application numbers increased in nine local authorities and decreased in 23 local authorities.

Compared to the same quarter in 2021, there were 11,230 more Crisis Grant applications (+18%) (**Table 3, Chart 1**). At local authority level the percentage change in applications varied from a 71% increase in East Renfrewshire (from 180 to 310) to a 15% decrease in Na h-Eileanan Siar (from 80 to 65 applications). Crisis Grant applications increased in 28 local authorities and decreased in 4 local authorities.

Chart 1: Applications to the Scottish Welfare Fund – Scotland – Monthly

During April to June 2022, 'Families facing exceptional pressure' was the most common reason for Community Care Grant applications (7,420, 35% of applications), followed by 'Helping people to stay in the community' (6,150, 29%) and 'Other reason' (4,485, 21%) (Table 4, Chart 2).

Since the start of the COVID-19 pandemic, local authorities received more applications for 'Families facing exceptional pressure' and for 'Other reason' compared to pre-COVID levels (Table 4); this may be due to local authorities recording COVID-19 related applications in that way.

Chart 2: Reasons for Application – Community Care Grants - Quarterly

Note: "Caring for a prisoner/offender on temporary release" and "No information" are not shown – in the most recently quarter these accounted for 0% of applications.

During April to June 2022, the most common reasons for Crisis Grant applications were different types of emergency (61,105, 84% of applications), followed by 'Other' reasons (11,290, 15% of applications) (Table 6, Chart 3).

Within the 'Emergency' category, the most common reason was 'benefit/income spent' (28,885, 40% of applications). Within the 'Other' category, the most common reason was 'Other – please specify' (9,170, 13% of all applications).

The overall increase in Crisis Grant applications compared to the same quarter of 2021 was predominantly accounted for by more applications for 'Emergency' reasons (8,270 more applications, +16%). At the same time, local authorities received more applications for 'Disaster' reasons (30 more applications, +6%), and 'Other' reasons (2,930 more applications, +35%), which may be where Covid-related cases are recorded by local authorities.

Chart 3: Reasons for Application – Crisis Grants – Quarterly

Processing Times

During April to June 2022, local authorities processed 87% of Community Care Grant applications within the target time of 15 working days (**Table 8, Chart 4**), and processed 88% of Crisis Grant applications within the target time of the end of the next working day (**Table 10, Chart 5**).

Ten local authorities processed fewer than 80% of Community Care Grant Applications on time (including Aberdeen 43% and Stirling 48%; **Table 9**) and eleven processed fewer than 90% of Crisis Grant applications on time (including Aberdeen 54% and Shetland 60%; **Table 11**). These processing times may have been affected by periods of high rates of applications for Self-Isolation Support Grants.

Chart 4: Initial Processing Times for Community Care Grants – Quarterly

Chart 5: Initial Processing Times for Crisis Grants – Quarterly

Note: The target processing time for Crisis Grants changed from two working days to the end of the next working day in April 2016.

Decisions and awards

During April to June 2022, decisions were made on 23,065 Community Care Grant applications (**Table 12**) with an acceptance rate of 54% (**Table 14 and Chart 7**) and decisions were made on 74,460 Crisis Grant applications (**Table 15**) with an acceptance rate of 64% (**Table 17 and Chart 7**).

Local authorities awarded 12,460 Community Care Grants, 265 (2%) more than April to June 2021 (**Table 13, Chart 6**) and 47,665 Crisis Grants, 7,075 (17%) more than April to June 2021 (**Table 16, Chart 6**).

Chart 6: Number of Scottish Welfare Fund Awards – Scotland – Monthly

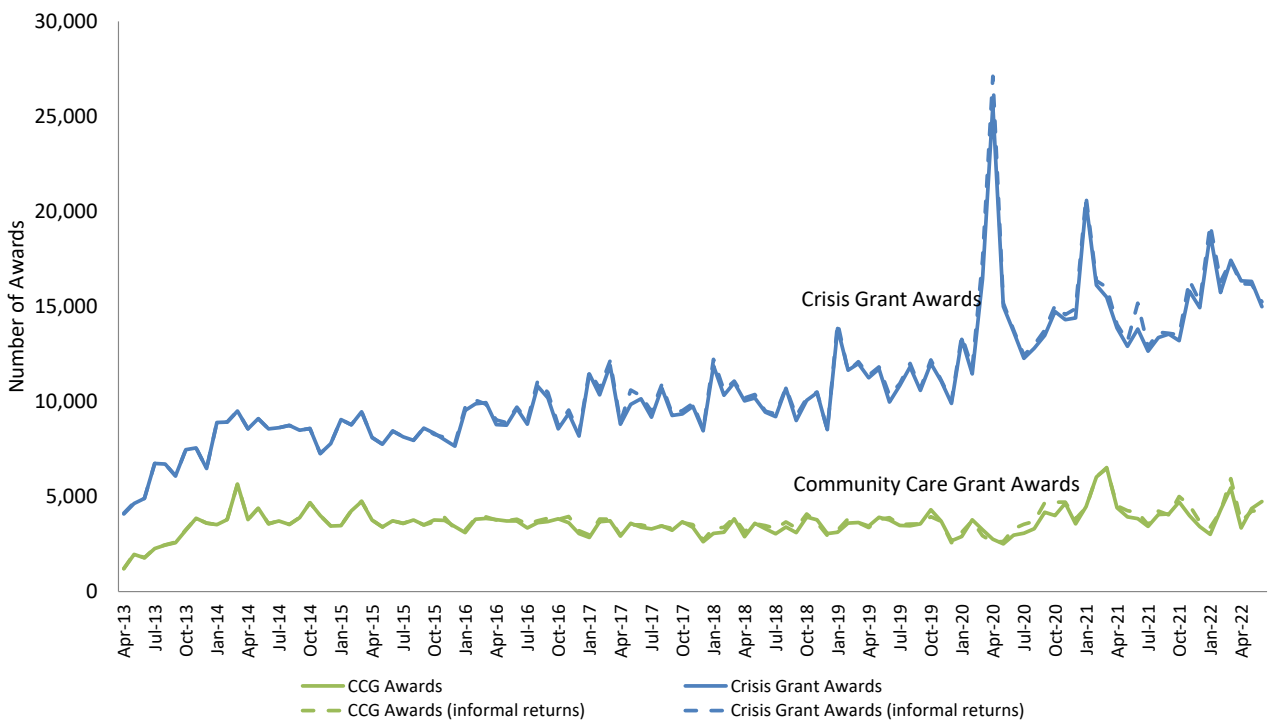

Chart 7: Community Care Grant and Crisis Grant acceptance rates – Quarterly

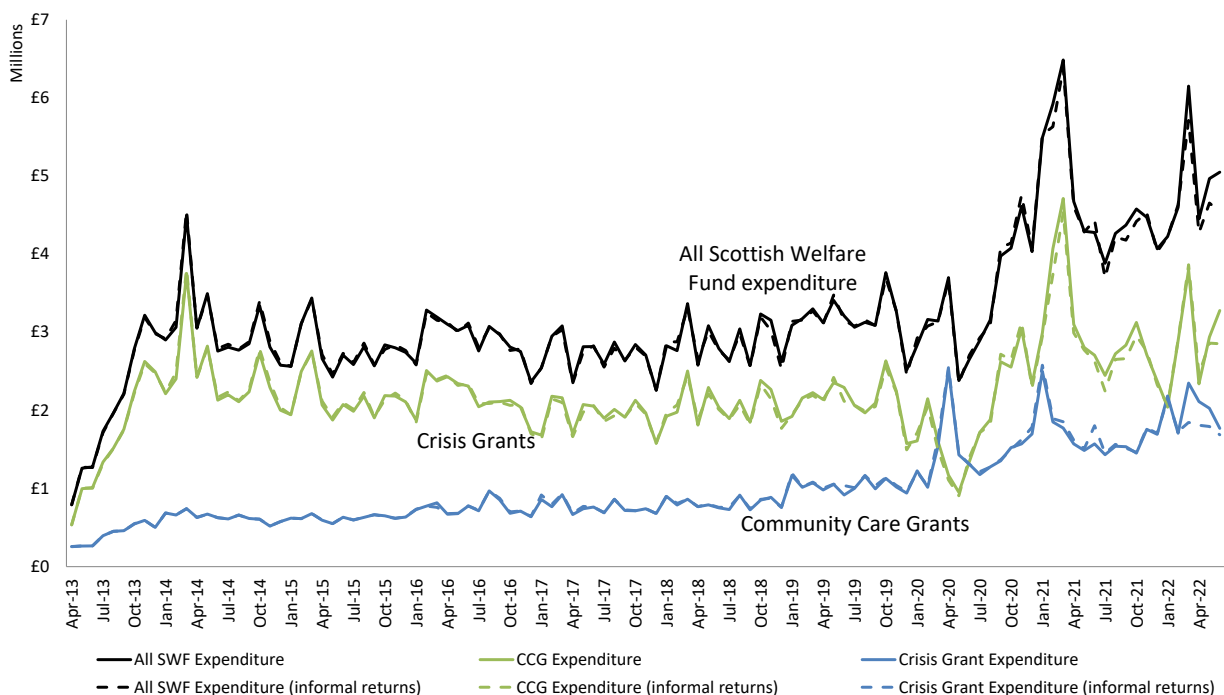

Expenditure and budgets

Unless otherwise stated, all expenditure information in this publication is based on the date of decision. As such it should be regarded as committed spend, rather than actual spend. Where a case has been reviewed, expenditure is assigned to the quarter of the initial decision rather than the review date. Further discussion of expenditure data quality is included in the [Data Quality](#) section of the publication.

Local authorities submit monthly management information to the Scottish Government. These returns contain expenditure information on Community Care Grants and Crisis Grants. **Chart 8** shows that expenditure recorded in the quarterly monitoring matches closely with the information in the management information at Scotland level. For most local authorities, there is agreement between the monthly and quarterly returns, and agreement is closer for expenditure data than for applications or awards figures in the latest quarter.

During April to June 2022, £14.5 million was spent through the Scottish Welfare Fund, 9% more (£1.2 million) than the same quarter in 2021 (**Table 23, Chart 8**). More was spent on Community Care Grants (£8.6 million) than on Crisis Grants (£5.9 million). Higher overall expenditure, compared to the same quarter of 2021, was driven by higher expenditure on Crisis Grants (an increase of £1.3 million, +28%). Compared to the same quarter of 2021, Community Care Grant expenditure was higher in 14 local authorities, while Crisis Grant expenditure increased in 27 local authorities (**Table 23**).

Chart 8: Expenditure on the Scottish Welfare Fund – Comparison of quarterly data and monthly management information – Scotland – Monthly

Local authorities have been allocated £35.5 million for Scottish Welfare Fund awards in 2022/23. There was also an estimated underspend of £4.3 million carried forward (see the [Data Quality](#) section for issues relating to estimation of underspend). Local authorities had spent £14.5 million by the end of June 2022, representing 36% of the estimated available budget. At this point in the year, if spending were consistent in each quarter we would expect local authorities to have spent 25% of their available budgets. In comparison, by the end of June 2021, local authorities had spent £13.2 million, representing 28% of the available budget, although the budget available for 2021/22 was considerably larger at £47.0 million due to additional Covid-related funding (**Table 24, Table 26, Chart 9 and Chart 10**).

The lowest percentage of budget spent (including estimated previous underspend) was 9% in Na-h Eileanan Siar. The highest were West Lothian (76%), Edinburgh City (56%) and Dumfries and Galloway (51%). Twenty-one other local authorities had spent at least 25% of their estimated available budgets and therefore may be on track to spend all of their available budget for 2022/23 at current rates of expenditure (**Table 26, Chart 9**). For data quality issues that affect expenditure during this financial year, see the [data quality section](#).

Chart 9: Proportion of annual budget spent as at 30 June 2022

Chart 10: Cumulative Expenditure on the Scottish Welfare Fund – Monthly

Family Reunion Crisis Grants:

Delivery of Family Reunion Crisis Grants commenced on 14 May 2018. The grants support refugee families arriving in Scotland under family reunion rules to settle with their family member already resident in the local authority area. Applicants can apply for both Crisis Grants and Community Care Grants through this scheme. Based on management information supplied to Scottish Government by local authorities, these grants have amounted to around £317,392.22 from 14 May 2018 to 30 June 2022.

Self-Isolation Support Grants:

Delivery of Self-Isolation Support Grants commenced on 12 October 2020. The grant is a £225 payment (originally £500) available for low-income workers who are asked to self-isolate because of coronavirus (COVID-19) and would lose income as a result. Self-Isolation Support Grants are made either as Crisis Grants or as discretionary grants for individuals with no recourse to public funds (NRPF). The local authorities administer the grant and supply management information to Scottish Government. By the end of August 2022, local authorities had awarded around 149,100 Self-Isolation Support Grants, totalling £72.8 million (**Table 46**). Comparisons should not be made between the numbers of applications received by local authorities, due to variations in the administrative systems used to apply for the grant (see [Background notes](#)).

Reviews

Since April 2013, there have been 29,185 Tier 1 reviews for Community Care Grants and 38,200 reviews for Crisis Grants (**Table 33**). Fewer than half of decisions were revised for Community Care Grants (47%) and Crisis Grants (43%) (**Table 34**).

Since April 2013, 76% of Tier 1 reviews for Community Care Grants have been made within the 15 working day target, while 88% of Tier 1 reviews for Crisis Grants have been made within the two working day target (**Table 35**).

Repeat Applications and Awards

During April to June 2022, a larger proportion of Crisis Grants applications and awards were repeats (70% and 61%, respectively), compared to Community Care Grants (30% and 14%, respectively) (Tables 40-43, Chart 11).

Compared to the same quarter in 2021, rates of repeat Community Care Grant applications were unchanged, while rates of repeat awards were lower (-2 percentage points). The rates of repeat Crisis Grant applications and awards were also lower (each by -3 percentage points).

The rates of repeat Crisis Grant applications and awards remain higher than any quarter before the COVID-19 pandemic. Increased rates of repeat applications and awards may be due individuals continuing to experience financial hardship, at least partly due to the increased cost of living, and due to the impacts of COVID-19.

Chart 11: Repeat applications and awards for Community Care Grants and Crisis Grants – Quarterly

Scottish Index of Multiple Deprivation

Scottish Welfare Fund awards tend to go to applicants living in more deprived areas of Scotland. Around one in five people in Scotland live in the 20% most deprived areas in Scotland, as defined by the Scottish Index of Multiple Deprivation (SIMD). In the latest quarter, around half of Community Care Grants and Crisis Grants (52% and 50% respectively) were awarded to applicants living in these areas. In comparison, around 2% and 3% respectively of Community Care Grants and Crisis Grants were awarded to applicants from the 20% least deprived areas (Table 36, Table 37, Chart 12).

The average value of Crisis Grant awards increased as deprivation decreased, and Community Care Grants were broadly similar across all quintiles except the fourth, which may be due to random variance. (Table 37, Chart 12).

Chart 12: Distribution of awards and average award value by SIMD 2020 Quintile rankings of applicant's postcode – latest quarter

Characteristics of Households in Receipt of Awards

Since the scheme began in April 2013, 481,330 unique households received at least one award from the Scottish Welfare Fund with the majority of these households receiving a Crisis Grant (358,855) than a Community Care Grant (265,095) (**Table 38, Chart 13**).

Of the 481,330 unique households that have received at least one award, over half (53%) were single person households, and 22% single parent households. In comparison, the 2019 household estimates for Scotland indicate that only 37% households are single people, and 6% households are [single parent families](#).

In total, since the scheme began, a third (35%) of households receiving awards have contained children (**Table 38b**). Of the total £355.6 million that has been awarded, £154.8 million has been awarded to households containing children.

Chart 13: Household types of unique households receiving funds from the Scottish Welfare Fund – all time

Gender balance of applicants for SWF

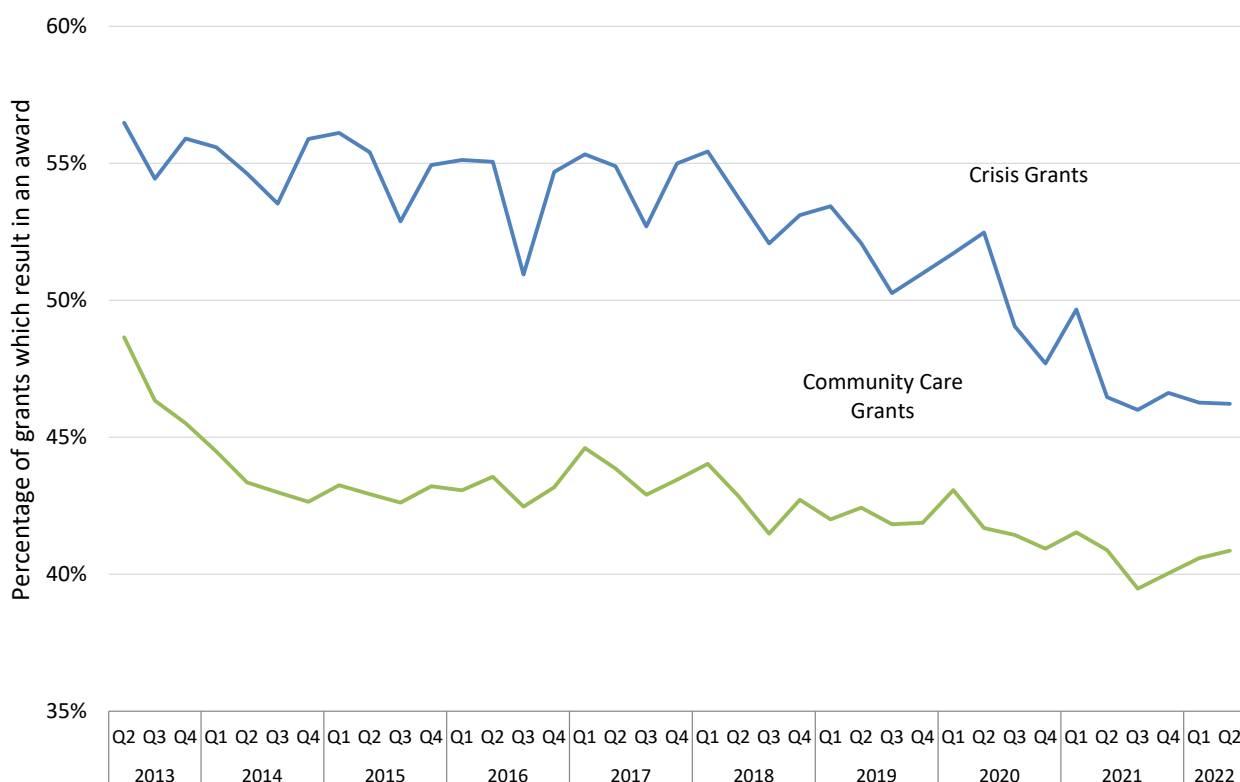

Awards

Since the scheme began in April 2013, there is a clear gender difference in applicants for Community Care Grants and Crisis Grants. From 2013 until around the start of the pandemic, the majority of applicants for Crisis Grants were male, whereas this has now changed, and most applicants are now female – 54% in the most recent quarter (**Table 3, Chart 14**).

There has always been a minority of males applying for Community Care Grants, and the proportion has declined over the duration of the scheme, and now sits at 41% in the latest quarter (**Table 2, Chart 14**).

A notable pattern that can be seen is that the proportion of males, especially when applying for Crisis Grants, falls annually in the third quarter. This could relate to the annual peak in births which occurs in late September, a time when new mothers may be more likely to apply for funding.

Chart 14: Proportion of Applications for Community Care Grants and Crisis Grants by males - Quarterly

Age of applicants for SWF Awards

The age of applicants has stayed reasonably steady during the lifetime of the SWF (**Table 2 & 3, Charts 15a & 15b**). For Community Care Grants, 25-49 age group make almost two-thirds of applications (64%) in the latest quarter, and most of the rest come from the oldest group.

For Crisis Grants, a similar pattern is seen, with 70% of applications from the 25-49 age group in the latest quarter, with the under-25s making more of the remaining applications.

Generally, it may be assumed that people in the 25-49 group are more likely to have children, and are less likely than older people to have established savings or other resources to cope with difficult circumstances. Conversely, the under-25s may also have these issues, but may be more able to call upon family members such as parents to help them.

Chart 15a: Age distribution of persons applying for Community Care Grants from the Scottish Welfare Fund – quarterly

Chart 15b: Age distribution of persons applying for Crisis Grants from the Scottish Welfare Fund – quarterly

Destination of SWF Awards

Since the scheme began in April 2013, most funds have been directed to Community Care Grants in almost every quarter, although, even before the advent of the Covid pandemic, there was a general increase in the proportion of money being advanced via Crisis Grants (**Chart 16**).

It has been seen that Crisis Grant awards increase during periods of high Covid infections, most notably in the early part of the pandemic, where more than two-thirds of SWF payments were made via Crisis Grants. Latterly, this may be related to periods of self-isolation for people who didn't qualify for Self-isolation Support Grants, but may more widely be related to support required for people whose earnings had fallen.

Chart 16: Proportion of SWF spend by scheme – Quarterly

Background

On 1 April 2013, the Department for Work and Pensions (DWP) abolished two elements of the Social Fund - Community Care Grants and Crisis Loans - and transferred funds previously spent on them to Scottish Ministers. In its place, the Scottish Government established the Scottish Welfare Fund. The Scottish Welfare Fund is a national grant scheme run by Local Authorities, based on [guidance](#) from Scottish Ministers. The guidance has been developed in partnership with COSLA, Local Authorities and other stakeholders.

The objectives of the scheme are to:

provide a safety net in a disaster or emergency, when there is an immediate threat to health or safety.

enable people to live independently or continue to live independently, preventing the need for institutional care.

There are two types of grants in the Scottish Welfare Fund – Crisis Grants, and Community Care Grants.

A Crisis Grant aims to help people on a low income who are in crisis because of a disaster or an emergency. A disaster is something like a fire or a flood. An emergency might be when money has been stolen.

A Community Care Grant aims to:

help people establish themselves in the community following a period of care, where circumstances indicate that there is a risk of the person not being able to live independently without this help.

help people remain in the community rather than going into care where circumstances indicate that there is a risk of the person not being able to live independently without this help.

help people set up home in the community, as part of a planned resettlement programme, following an unsettled way of life.

help families facing exceptional pressures, with one-off items, like a cooker or a washing machine.

help people to care for a prisoner or young offender on release on temporary licence.

The Scottish Welfare Fund is a discretionary, budget-limited grant scheme that prioritises applications according to need. It provides grants that do not have to be repaid. It does not provide loans.

The DWP transferred the funding spent in Scotland on its Community Care Grants and Crisis Loans for Living Expenses to the Scottish Government. For 2013/14 and 2014/15

this amounted to £23.8 million. The Scottish Government topped this amount up by a further £9.2 million, giving the Scottish Welfare Fund a total budget of £33 million for both these years. This level was maintained at £33 million from 2015/16 to 2019/20 by the Scottish Government. Local Authorities have been able to top this up with their own funds, together with any underspends carried forward from previous years. There is no statutory limit on the amount of money which can be spent on the Scottish Welfare Fund.

In 2020/21 the programme budget for the Scottish Welfare Fund was increased to £35.5 million. In addition, £22 million was allocated in response to COVID-19 in March 2020. Funding has remained at this level since.

The Scottish Welfare Fund was introduced on an interim basis for the first three years, prior to setting the Fund out in law. The [Welfare Funds \(Scotland\) Act 2015](#) received Royal Assent on 8 April 2015 and placed the Scottish Welfare Fund into law from 1 April 2016. The Act is supported by the [Welfare Funds \(Scotland\) Regulations 2016](#), and statutory guidance.

Local Authority delivery

Local Authorities have the discretion to provide support in different ways. Not all grants will be cash payments. They may provide vouchers, a fuel card, or goods if they think that is the best way to meet the need.

Local Authorities also have discretion on where in their organisation they process applications and how they link the scheme to existing services.

A Local Authority may provide assistance out of its SWF only to a person who is resident in the Local Authority area, is about to become resident in the Local Authority area, or a person who is homeless. Applicants should apply to the appropriate Local Authority. The application process will depend on the Local Authority's approach to wider service delivery and the infrastructure it has in place. Local Authorities must make provision for applications to be taken via three delivery channels, for example, online, on the phone and face-to-face.

Details of applications, how they were processed, and the outcomes and expenditure associated with applications are stored on Local Authorities' IT systems. Four IT companies provide IT systems which underpin the provision of the Scottish Welfare Fund.

Application process

Applications are processed by decision makers within Local Authorities. Scottish Government produces statutory guidance to provide a framework for decision makers to promote consistency in decision making. In making decisions, Local Authorities need to balance the needs of the applicant against the remaining budget.

Joint applications for a Crisis Grant and Community Care Grant are treated as two separate applications. In these statistics they are also counted as two separate applications.

It is for the Local Authority to determine whether a grant should be made as a Crisis or a Community Care Grant. If an applicant applies for one, the Local Authority may decide to award the other if it is more appropriate to the applicant's circumstances.

Applicants can make repeated applications for the Scottish Welfare Fund. A Local Authority does not need to consider an application if a person has applied for a Community Care Grant or a Crisis Grant for the same items or services within the last 28 days, where a decision has already been made and there has not been a relevant change of circumstances. Additionally, the number of Crisis Grant awards should normally be limited to three per person in any rolling 12 month period across all Local Authorities, although there can be exceptions.

An initial decision will be made on the application, either to make an award for all or some of the requested items, or to not make any award. In these statistics we refer to these outcomes as 'accepted' and 'rejected' respectively. Crisis Grants are typically made in cash or cash equivalent. Community Care Grants can be fulfilled in cash, cash-equivalent or in kind, for example by providing white goods or furnishings.

The target time for processing applications is 15 working days after receiving all the information allowing a decision to be made for Community Care Grants and by the end of the next working day for Crisis Grants.

Review process

If an applicant disagrees with the outcome of their application, there are two possible review stages. Firstly, a Tier 1 review will be carried out by the Local Authority. The target time for processing Tier 1 reviews is the end of the second working day for crisis reviews, and 15 working days for Community Care Grant reviews. At this point the original decision will either be 'revised' or 'not revised'.

Following this, an independent Tier 2 review may be carried out by the Scottish Public Services Ombudsman (SPSO). Tier 2 reviews have been carried out by the SPSO since 1 April 2016 (previously this was done by Local Authorities). Information on tier 2 reviews carried out by SPSO can be found in the [SPSO's Annual Reports](#) and [Annual Statistics 2019- 20](#).

Family Reunion Crisis Grants and Community Care Grants for 18-21 year olds

Family Reunion Crisis Grants, and Community Care Grants for 18-21 year olds affected by the change to the entitlement for housing costs within Universal Credit, are processed by Local Authorities using the same IT systems as other Scottish Welfare Fund awards. We therefore receive data for these Community Care Grant applications in monthly and quarterly data returns. However, these specific types of grants are not funded through the main Scottish Government allocation for awards. Local Authorities are reimbursed separately for these awards. Local Authorities send separate quarterly returns detailing the application reference numbers of applications for Family Reunion Crisis Grants, and 18-21 year olds affected by the change to the entitlement for housing costs.

We have excluded these applications from the analysis when producing this publication and accompanying publication tables.

Self-Isolation Support Grants

Self-Isolation Support Grants are made either as Crisis Grants or as discretionary grants for individuals with No Recourse to Public Funds (NRPF). These grants are not funded through the main Scottish Government allocation for awards, so Local Authorities provide Scottish Government with monthly summary figures for applications received and the number and value of awards made. Self-Isolation Support Grants are processed by some Local Authorities using separate administrative systems, however other Local Authorities use the same IT system as their Scottish Welfare Fund awards. For those who use the same IT system, we also receive monthly returns detailing the application reference numbers and the date of the application. We use this information to flag the Self-Isolation Support Grant applications and exclude them from the analysis when producing this publication and accompanying publication tables.

Work is ongoing to improve how these applications are flagged. In a small number of cases, applications that are flagged don't appear to fit the criteria to be Self-Isolation Support Grants (i.e. amount paid was not equal to £500, or application date was before this scheme started), and some applications may be part of joint applications, meaning that accounting for them is more complex. There has been an update to the methodology in this release to improve accuracy where possible, and this work will continue in future updates.

Local Authority level application figures should not be compared with each other due to several factors that are known to influence the number applications:

- i) in the early stages of the scheme, and after expanding eligibility criteria, it is expected there are larger numbers of speculative applications that are not eligible.
- ii) local authorities are currently taking different approaches to receiving/processing applications. In local authorities where online applications are used a higher number of non-eligible applications may be included in the data. As a result, the award rate in these councils may be lower than in those where applications are only possible via phone, email or outbound calling.
- iii) figures may include applications that have been received but are still being processed.
- iv) the extent and impacts of the pandemic have varied widely across and within local authorities.

About the Data

How the data is collected

One month after the end of each quarter, Local Authorities are asked to submit an XML file containing the information as set out in the data specification.

The data specification for the Scottish Welfare Fund is available [here](#).

Guidance to help Local Authority officers to record information is available [here](#).

and guidance for Family Reunion Crisis Grants [here](#).

The data sent to Scottish Government each quarter should include all applications where an initial decision, Tier 1 review or Tier 2 review have been completed, plus any updates to previous cases (e.g. where information within a case has been revised, or a case has reached a different stage). To take account of delays between applications being received and decisions made, and retrospective changes in award values, the data cuts that are sent to Scottish Government each quarter should be sent at least a month after the end of the quarter that will be reported on.

This data is then uploaded to the Scottish Government's [ProcXed](#) website. Once the data has been validated by our software, the data is passed over to the Scottish Government's Communities Analysis Division.

Revisions

Each updated publication of statistics will include revisions to figures for previous quarters, with more recent quarters being subject to a greater degree of revision than more distant ones. There are several reasons for this:

(i) the cuts of data received by Scottish Government each quarter will include retrospective changes to past applications. For example, where the actual amount spent on an item was different to the amount initially awarded, this expenditure will be updated in the new data cut.

(ii) the cuts of data received by Scottish Government only include information about applications that have at least reached the stage of having an initial decision made. Some applications may therefore be received by the Local Authority in one quarter and decided in the next quarter. Scottish Government would only receive details about these applications in the next quarter's data cut, at which point the application will be added into the previous quarter's application statistics retrospectively.

(iii) Tier 1 and Tier 2 reviews can lead to changes in final outcome and final award amount. Where a case has been reviewed, expenditure is assigned to the quarter of the initial decision rather than the review date.

Processing times

Initial Processing Time is the number of working days between the date all information was received and the initial decision. Our count of working days counts the number of Mondays to Fridays between these two dates. No allowance is made for local holidays and bank holidays. If the date all information was provided is missing, the application date is used instead.

Households

We collect information on all people within each application. To group people into household units we filter the people table to contain only the main applicant and their partner. We ensure that there is no more than two people for each application. We generate a unique household reference based on the hashed National Insurance Number, gender and date of birth of the main applicant, and if applicable, their partner.

Repeat applications and awards

An application is defined as a repeat application if the household made another Community Care Grant or Crisis Grant application within the 12 months of the current application. Similarly a repeat award occurs if an award was made within 12 months of the current award. While there is no limit on the number of Community Care Grants an individual can receive in any one year, Crisis Grants are normally limited to three in a rolling 12 month period.

Data quality

To ensure the data we receive is of the highest quality, we have asked all IT providers to implement the data specification as fully as possible. The data specification includes a number of validations. These validations are provided through an XSD schema and have also been implemented into the ProcXed system. Once Local Authorities submit data to the ProcXed system, a number of validations are triggered and warning messages appear. Local Authorities may re-submit data to fix these errors or they can comment them to explain why they believe the data to be valid. On submission of the data to the Scottish Government, each Local Authority is sent a detailed automatic report showing the contents of the data and any remaining errors.

To ensure sufficient data has been submitted, we cross check all submitted data with the monthly management information submitted to the Scottish Government (**Chart 6, Chart 8**). The automatic reports sent to Local Authorities contain charts which allow them to easily see if there is a discrepancy between these two data sources.

Known data issues:

City of Edinburgh experienced a software issue in March 2020 that has caused some Crisis Grant awards and expenditure from March 2020 to be recorded in April 2020 in the quarterly data extract supplied to Scottish Government. Comparison of the quarterly data to monthly management information (**Table 45**) indicates that around 1,335 crisis awards and £141,000 associated expenditure made in March 2020 has been shifted into April 2020 in the quarterly data extract used to produce this publication. This means that in

Edinburgh in Jan-Mar 2020 around 33% crisis awards and 38% expenditure are missing, and in Apr-Jun 2020 around 17% of crisis awards and expenditure should have been recorded in the previous quarter. Scotland totals will also be affected. It is not currently possible to amend case details so that they appear against the correct month/quarter/financial year.

In March 2020, some COVID-19 related Crisis Grant applications received by Glasgow City were recorded as Community Care Grant applications in the quarterly data extract supplied to Scottish Government. Comparison to the monthly management information (**Tables 44 and 45**) supplied separately by the local authority indicates that in March 2020, around 1,000 applications, 400 awards and £60,000 associated expenditure has been recorded as Community Care Grants rather than Crisis Grants. However, this is difficult to quantify exactly due to ongoing and pre-existing discrepancies between the monthly management information and quarterly extract. These issues will also affect Scotland totals. From April 2020 onwards the issue of COVID related Crisis Grants being recorded as Community Care Grants appears to have been resolved.

Scotland level figures are affected by specific issues described for Edinburgh and Glasgow and there may be additional issues with data quality related to COVID-19. Comparison of management information (**Tables 44 and 45**) and figures derived from quarterly data extracts indicates discrepancies in numbers of applications, awards and expenditure for several local authorities. In many cases, the quarterly extract included fewer Community Care Grants and/or Crisis Grants than the monthly figures. This could be due to delays in applications being processed, applications being withdrawn, or awards being kept as 'pending' or 'in principle' on local authority systems until they can be delivered/installed etc. Overall at Scotland level, compared to the monthly management information the quarterly data extracts contained 3% fewer CCG applications, but 2% more CCG awards and 5% more CCG expenditure; while there were 1% fewer Crisis Grant, but 1% more Crisis Grant awards and 12% more Crisis Grant expenditure. Issues caused by processing or delivery/installation delays should be resolved in future updates to the publication as more data extracts are received. Any issues caused by processing or delivery/installation delays should be resolved in future updates to the publication as more data extracts are received.

Missing information/delays in receiving information:

An application is included in the quarterly data extract to the Scottish Government only when an application has been decided and when a payment has been made. For Crisis Grants, applications are less complex and payments are made quickly, resulting in almost no lag between cases being decided and being included in the data extract. However, for Community Care Grants, a large number of items may need to be ordered and payment may not occur until up to one month later, when invoices arrive. This results in a lag time between applications beginning in the Local Authority and applications being included in the extract to the Scottish Government. To rectify this problem, we are asking Local Authorities to submit data one to two months after the end of the quarter. This will ensure that, as far as possible, all relevant cases are included in the data extract.

Some Local Authorities may not have been able to enter all of their data in time to include in this publication. Late entry of data may mean that this data appears in subsequent quarters, rather than in the quarter when the case was actually dealt with.

As dates are automatically system generated, late entry of data has a knock on effect on any calculation which involves processing times or payment times.

Some question responses may default to “Other” in some IT systems. This particularly applies for reasons for applications, rejections, reviews and review decisions. We are currently working with IT providers and Local Authorities to ensure that the full range of questions and responses are available in all Local Authority IT systems. Some questions may not be completed at all. This includes the vulnerability and referrals questions for some Local Authorities.

During the Covid pandemic, there have been unusual delays in processing applications due to high volumes of applications for Self-Isolation Support Grants, which are often dealt with by the same teams. This has sometimes led to delays in recording applications and their outcomes.

Expenditure:

Unless otherwise stated, all expenditure information in this publication is based on the date of decision. As such it should be regarded as committed spend, rather than actual spend. For example, a Local Authority may commit to purchasing floor coverings for a household and set aside money for this (on the decision date). In practice, it may be some time later before the Local Authority is invoiced and pays the money to the supplier (on the payment date). Overall, there is very little difference between analysing expenditure information using payment dates as opposed to decision dates. Where a case has been reviewed, expenditure is assigned to the quarter of the initial decision rather than the review date. This means that if the initial decision took place in 2018/19 but a review decision is made in 2019/20, all of the expenditure for the case is counted in 2018/19.

It is possible for the value of an award to increase or decrease between the decision and payment date. For example, Local Authorities may estimate the cost of carpets and the final invoice for these may be less than originally thought. This results in money being paid back into their systems. Where we receive updated information about this change in expenditure in quarterly data returns, the statistics for previous quarters are updated to reflect this. We also receive separate reconciliations information from some Local Authorities. Over time, the expenditure data in the quarterly monitoring may exceed monies actually spent if reconciliations are not applied.

West Lothian indicated that the expenditure for 2013/14 is an underestimate. This appears to have been due to issues in setting up the IT system for this data collection at the start of the scheme in 2013. Information about expenditure was collected manually rather than through ProcXed and cannot now be updated. West Lothian have indicated that this has led to an ongoing underspend being calculated for the Local Authority. Additionally, other Local Authorities have indicated that the figures published for annual over- and underspend do not always match Local Authorities' own accounts.

Where Scottish Government receive updated information about expenditure from Local Authorities, the statistics for previous quarters are updated to reflect this. However, Local Authorities have a cut-off point after the end of a financial year at which point they have to produce accounts. At this point, expenditure for the year is calculated, and over- or underspend is calculated. At this point the council meets the overspend, or rolls forward the underspend to the next financial year's budget. If there is a change in the value of an award after this date, this will not be reflected in Local Authority calculation

of the available budget for the next financial year. Additionally, some Local Authorities may choose to top up the budget for the fund at the start of a financial year with additional funds.

In previous publications, we have included funds provided by Local Authorities in the available budget. However, this funding has been removed from calculations. Available budget therefore only represents the amounts allocated by Scottish Government plus any underspend from previous years, and it is assumed that Local Authorities meet any overspend each year.

Each year the discrepancies between these annual expenditure figures and Local Authorities' accounts are compounded. We are reviewing these differences and to realign our calculation of Local Authorities' over- or underspend.

Joint Community Care Grant and Crisis Grant applications:

Households can apply for both Community Care Grants and Crisis Grants in the same application. In versions of the publication covering the period up to December 2017, total applications reported were the total number of applications recorded on Local Authority IT systems. In some Local Authorities, these applications in some cases will include both a Community Care Grant and a Crisis Grant element. However, some Local Authorities now have a facility to split a single application into the Community Care Grant and Crisis Grant elements, and treat these as two separate applications. Where Local Authorities have used this facility on their IT system, Scottish government would receive this as two separate applications, with no information about whether they had originally been made together as one application.

Because of this, we changed the methodology for how total applications to Scottish Welfare Fund are reported, from the 2017/18 publication onwards. For all Local Authorities, we now report the number of Community Care Grants and number of Crisis Grant applications added together. Therefore, joint applications for Community Care Grants and Crisis Grants will now be counted in the figures as two applications. This makes the figures for total Scottish Welfare Fund applications consistent across all the Local Authorities. In addition to the issue described above, Local Authorities have informed us that on some occasions, applicants may tick boxes on their application forms to apply for both a Community Care Grant and a Crisis Grant, but based on the types of item that have been requested, the Local Authority may process this application as only a Community Care Grant (e.g. if only flooring requested) or only a Crisis Grant (e.g. if only food requested). In these cases, the statistics in this publication reflect the way in which an application has been processed by the Local Authority, rather than the original tick boxes selected by an applicant.

Reviews:

Orkney are unable to supply Tier 1 review information via the ProcXed system. Orkney have supplied full details about all reviews carried out separately, however numbers are small.

East Ayrshire were unable to submit data on Tier 1 reviews via the ProcXed system until July 2018, but were able to supply summary information about numbers of review applications and decisions separately for 2014 onwards, which is included in the publication tables. This accounts for a further 2% Community Care Grants and less than

1% Crisis Grants where it is unknown if reviews were made within target times. From July 2018 onwards, East Ayrshire have supplied full review information via ProcXed.

Improvements:

We are working with Local Authorities to make the data more consistent across data fields and Local Authorities. We are reviewing how Local Authorities interpret the guidance and record information and also identifying issues that are due differences in IT systems.

Comparisons with other UK Statistics

Annual reports by the Secretary of State for Work and Pensions on the Social Fund for the period prior to 1 April 2013 are available from the Department for Work and Pensions. The most recently available report can be found [here](#).

On 1 April 2013, the Department for Work and Pensions devolved the responsibility for Community Care Grants and Crisis Loans to the Scottish Government, the Welsh Government and directly to English Local Authorities.

As a single national scheme covering the UK is no longer in operation, comparable statistics for other parts of the UK are not available.

An Official Statistics publication for Scotland

Official and National Statistics are produced to high professional standards set out in the Code of Practice for Official Statistics. Both undergo regular quality assurance reviews to ensure that they meet customer needs and are produced free from any political interference.

Correspondence and enquiries

Ian Volante

Social Security Statistics

e-mail: SocialSecurityStats@gov.scot

For general enquiries about Scottish Government statistics please contact:

Office of the Chief Statistician, Telephone: 0131 244 0442,

e-mail: statistics.enquiries@scotland.gsi.gov.uk

How to access background or source data

The data collected for this statistical bulletin:

- are available in more detail through statistics.gov.scot
- are available via an alternative route. Summary tables are available [here](#):
- may be made available on request, subject to consideration of legal and ethical factors. Please contact SocialSecurityStats@gov.scot for further information.
- cannot be made available by Scottish Government for further analysis as Scottish Government is not the data controller.

Complaints and suggestions

If you are not satisfied with our service or have any comments or suggestions, please write to the Chief Statistician, 3WR, St Andrews House, Edinburgh, EH1 3DG, Telephone: (0131) 244 0302, e-mail statistics.enquiries@scotland.gsi.gov.uk.

If you would like to be consulted about statistical collections or receive notification of publications, please register your interest [here](#).
