

Total income from farming estimates: 2018-2024 – Table changes

Changes to workbooks

Tables for total income from farming annual estimates have been redesigned to improve accessibility and to provide more information about the data.

Previously data were published in one workbook to support the total income from farming publication and more detailed data were published as part of the Economic Report on Scottish Agriculture.

These data are now published in nine new total income from farming estimates workbooks:

- Total income from farming, inputs and outputs timeseries at current prices and in real terms
- Crop areas, yields, production, outputs and utilisation
- Livestock outputs, prices and values
- Input prices
- Agricultural bank advances
- Agricultural support payments
- Investment by farmers
- Productivity Indices
- Major economic indicators of Scottish agriculture

In this document, Table 1 maps the tables from the from previous “Publication tables” to new total income from farming estimates workbooks.

Table 2 maps data from the previous “Scottish agriculture tables - economic report” to new total income from farming estimates workbooks.

Tell us what you think

We are still developing these tables and are very interested in hearing what you think about these changes. Please send any feedback or questions to agric.stats@gov.scot.
