Case No: 2025-0271 Date of visit: 17/07/2025

Additional inspector(s): Main Inspector: [redacted]

Site No: FS0209 Site Name: Scallastle
Business No: FB0125 Business Name: Scottish Sea Farms Ltd

Case Types: 1 ECI 2 CNI 3 SLI 4 DIA 5 STI 6

Water Temp (°C): 13.7 Thermometer No: T172 FHI 045 completed N

Observations: Region: ST Water type: S CoGP MA: M-35

Dead/weak/abnormally behaving fish present?	Y	If yes, see additional information/clinical score sheet.
Clinical signs of disease observed?	Y	If yes, see additional information/clinical score sheet.
Post mortem signs observed?	Y	If yes, see additional information/clinical score sheet.
Diagnostic samples taken?	Y	

UNI/REG only - if unable to carry out intended visit detail reason below:

Additional Case Information:

Inspection undertaken following the confirmation of clinical BKD at a site within one tidal excursion, Fishnish (A) (FS0427)

Wild and farm grown wrasse on site

Area manager to contact office regarding invoice for dead fish removed from the site. The fish are removed in a skip operated by Billy Bowie

Two SLICE treatments conducted in the current cycle due to slight increase in juvenile numbers. Numbers of lice reduced following the treatments

Weekly fish health meetings held with veterinary involvement.

When the fish are larger, the salmon on site will be spread between the 8 cages currently on site. There are no plans to move any live fish off the site before harvest.

Low levels of AGD detected via gill swab PCR. No clinical AGD observed in population.

Case No: 2025-0271 Site No: FS0209

Date of Visit: 17/07/2025 Main Insp: [redacted]

Registration/Authorisation Details

1. Business/site details summary checked by site representative?	Y
2. Changes made to details?	Y

Site Details (include cleaner fish for all sections)

Total No facilities	8	Facilities stocked	3	No facilities inspected	8		
Species	Atlantic salmon	WRS					
Age group	S1 25	Mixed					
No Fish	570,990	17,900					
Mean Fish Wt	469g	Mixed					
Next Fallow Date (Site)	Aug 2026	Next Input Date (Site)	Mar 2027				
Recent (last 4 wks) disease problems?	N	Any escapes (since last visit)?	N				
If yes, detail:							

Movement Records

1. Movement records for **all species** held available for inspection?	Y
2. Date of last inspection:	29/11/2023
3. Are records complete and correctly entered?	Y
4. Are movement records available for dead fish and waste?	N
5. Are records complete and correctly entered?	N/A
6. Have all introductions and imports (since last inspection) from outwith the GB health zone been recorded in the movement records?	N/A

Transport Records

1. Are any movements carried out not using a STB (by (or on behalf of) the business)?	N
If yes, is there a system in place for maintenance of transportation records?	

Mortality Records

1. Mortality records for **all species** held available for inspection?	Y
2. How are mortalities disposed of?	Biogas - Barkip
If other detail:	
3. Mortality records complete and correctly entered?	Y
4. Recent mortality (last 4 wks):	SAL: wk 29: 138 fish (0.02%), wk 28: 309 fish (0.05%), wk 27: 238 fish (0.04%), wk 26: 103 fish (0.02%). WRS: wk 29: 32 fish
5. Evidence of recent increased/atypical mortalities?	N
If yes, facility nos/no mortality per facility/no stock per facility/reason:	
6. Any other peaks in mortality during period checked?	Y
If yes, detail:	Mortality due to CGD in October to December 2023: since the last inspection mortality peaked at 1.7% (6,938 fish) in wk 50 of Dec 23. Exceeding notifiable criteria again in Aug 24 for 3 weeks due to CGD and viral disease. Fish since harvested.
7. Have increased (unexplained) mortalities been reported to vet or FHI?	N/A
If yes, detail action:	
8. Have 'mortality events' been reported to FHI? If no, enter details on mortality events sheet.	Y

Treatments and Medicines Records

1. Recent treatments (see comment)?	Y
If yes, detail:	T.M.S.
If other, detail:	
2. Medicines records available for inspection?	Y
3. Are records complete and correctly entered?	Y
4. Are fish in a withdrawal period?	Y
5. If yes, what treatment(s)?	T.M.S.
If other, detail:	
6. Are medicines stored appropriately?	Y

Biosecurity Records

1. Biosecurity records available for inspection?	Y
2. Has the manner and frequency of mortality removal, recording and safe disposal been considered?	Y
3. Has the manner and period in which the APB will notify Scottish Ministers or veterinary professional of any *increased* (*unexplained)* mortality at the site been included?	Y
4. Has the action that will be taken in the event that the presence or suspicion of the presence of a listed disease is detected been included and *how* and *when* that will be notified to Scottish Ministers?	Y
5. Has the health status of aquaculture animals being stocked on the farm site been covered (equal or higher health status, certification if required)?	Y
6. Have the husbandry and biosecurity measures implemented between each epidemiological unit to minimise transmission of disease been covered (movement of staff, visitors, equipment, live or dead fish etc.)?	Y
7. Is documentation available regarding the measures in place to maintain the physical containment of aquaculture animals held on site?	Y
8. Have the biosecurity procedures been adequately implemented on site?	Y
If no, detail:	

Results of Surveillance

1. Has any animal health surveillance been carried out by, or on behalf of, the business?	Y
2. If yes, are results available for inspection?	Y
3. Any significant results?	Y
If yes, detail (if not detailed under recent disease problems).	CGD - see above

Sea Lice Inspection (Seawater Sites Only)

1. Has the site experienced sea lice problems in the previous 4 years?	N
2. Is the CoGP Farm Management Area (or equivalent) fallowed synchronously on a single year class basis?	Y
3. Does the site have access to a range of licenced in-feed and bath sea lice medications (including deltamethrin, azamethiphos and emamectin benzoate) as well as access to suitable biological and/or mechanical control measures, and can these be deployed in a reasonable period of time?	Y
4. Is there a signed documented farm management agreement or statement relevant to the site and CoGP Farm Management Area (or equivalent)?	Y
5. Are sea lice count records available for inspection? (Legal SSI, CoGP Annex 6)	Y
6. Do records adequately reflect the required standard specified in the SSI and the CoGP? (Legal SSI, CoGP Annex 6)	Y
7. Are sea lice (L. salmonis) record levels below the suggested criteria for treatment in the CoGP during the period that records are inspected? (CoGP Annex 6)	Y
8. Have weekly average adult female sea lice counts at or above the intervention level been reported accurately?	N/A
If no, please detail in additional information.	
9. Is *C. elongatus* infestation at a level which is considered to cause significant welfare problems? (CoGP 4.3.81, 5.3.50)	N
10. Have therapeutic treatments been administered or other actions taken when *L. salmonis levels* have exceeded the suggested criteria for treatment or where *C. elongatus* is considered to have welfare implications? (CoGP 4.3.82, 5.3.51)	N/A
11. Has any other action been taken (where applicable)?	Y
12. Have therapeutic treatments or the actions taken had a significant impact upon the lice levels recorded?	Y
13. Are treatments, where conducted, carried out in cooperation between participating farms?	Y
14. Is there a harvesting strategy for the site, where fewer populations or part populations are held without treatment for sea lice?	Y
15. Is there a site specific written lice management procedure with waypoints describing set actions to deal with recognised scenarios during the escalation of a sea lice infestation?	Y
16. Do the sea lice levels observed on stocks reflect sea lice count data? If no please detail reasons.	Y

Containment Inspection

1. Has the site experienced equipment damage due to predators in the current or previous production cycles?	N
2. Are measures in place to mitigate against the predation experienced on site? (Detail below)	Y

Top Nets	Predator Nets (below	Seal Blinds	Tensioned Nets		

If other, detail below:

3. Have escape incidents or events been experienced on or in the vicinity of the site since the last FHI inspection?	N
If Yes proceed with questions 4 – 9. If No skip to question 10	
4. Have these been reported to Scottish Ministers?	
5. Have these been reported to local DSFB forthwith (where they exist)? (CoGP – 4.4.37, 5.4.17)	
6. Have these been reported to the SSPO and local fisheries trusts forthwith (where they exist)? (CoGP – 4.4.37, 5.4.17)	
7. Were methods (if any) used to recover escapees? If yes give detail	
8. If gill nets were deployed was this action agreed with local wild fish interests and was permission given by Scottish Ministers? (Legal, CoGP – 4.4.38, 5.4.18)	
9. What action was taken to prevent and minimise the risk of further escapes? (Not covered in code but could be considered under satisfactory measures of the Act)	
10. Is the site inspected as satisfactory with regards to containment? If no, please detail reason(s)	Y

Case No: 2025-0271 Site No: FS0209

Date of Visit: 17/07/2025 Main Insp: [redacted]

Point of Compliance

1. Is the farm under inspection located within a farm management area?	Y

If N, no further questions require completion.

Points of Compliance for Both Farm Management Agreements and Statements

2. Has a current farm management agreement or statement (FMAg/S) been prepared?	Y
3. Is the current FMAg/S available for inspection?	Y
4. Does the FMAg/S identify the relevant farm management area?	Y
5. Does the FMAg/S identify the fish farm site(s) to which it applies?	Y
6. Does the FMAg/S identify the date of commencement of the agreement or statement?	Y
7. Does the FMAg/S identify the date of review?	Y

Arrangements for Fish Health Management

8. Does the FMAg/S identify the minimum health standards for the stocks to be introduced to the area or farm?	Y
9. Does the FMAg/S identify the vaccination requirements for stocks held in the area or farm?	Y
10. Does the FMAg/S identify the species of fish which may be stocked into the area or farm?	Y
11. Does the FMAg/S identify the maximum stocking density of any pen on any farm in the area or the individual farm?	Y
12. Does the FMAg/S identify the arrangements for the storage and disposal of any dead fish from any fish farm in the area or the individual farm?	Y

Arrangements for The Management of Sea Lice

13. Does the FMAg/S identify arrangements for the sharing of data on sea lice numbers and treatments?	Y
14. Does the FMAg/S identify the availability and the use of medicines on farms covered by the agreement of statement?	Y
15. Does the FMAg/S identify any requirements for the sensitivity testing of available treatments for sea lice on farms in the area or individual farms?	Y
16. Does the FMAg/S identify the circumstances under which biological controls and cleaner fish are to be used on farms in the area or individual farms?	Y
17. Does the FMAg/S identify the arrangements for synchronous treatments on farms within the area?	Y

Live Fish Movements

18. Does the FMAg/S identify the circumstances when live fish may be introduced or removed from the area or farm?	Y
19. Does the FMAg/S identify the arrangements for the movement of live fish on and off sites in the area or individual farms?	Y

Harvesting

20. Does the FMAg/S identify acceptable harvest practices on farms in the area or individual farms?	Y

Fallowing

21. Does the FMAg/S identify the dates by which the area or individual farm will be fallow and the earliest date when a farm or area may be restocked?	Y
22. Does the FMAg/S identify whether one or more year classes may be stocked onto sites covered by the agreement or statement?	Y
23. Does the FMAg/S identify whether broodstock or potential broodstock are to be kept on any site covered by the agreement or statement?	Y

Point of Compliance for Farm Management Agreements Only

24. Does the farm management agreement include arrangements for persons to become, or cease to be, parties to the agreement?	Y

Management and operation

25. Is the fish farm being managed and operated in accordance with the agreement or statement?	Y
26. What is the version no/date of issue of the FMAg/S?	01/10/2024

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

BUSINESS NO	FB0125	**DATE OF VISIT**	17/07/2025
SITE NO	FS0209	**SITE NAME**	Scallastle
CASE NO	20250271	**INSPECTOR**	[redacted]

Amended Fish Health Inspectorate Visit Report

This report replaces the fish health report R22 issued on 29/07/2025 by [redacted] The previous report should be discarded. The wording of the 3rd paragraph has changed.

The above site was inspected as it is located within one tidal excursion of a site where the presence of clinical bacterial kidney disease (BKD) has been confirmed. A visit has been arranged to confirm or rule out the presence of clinical BKD at this site.

All epidemiological units were inspected. Signs consistent with the presence of clinical BKD were observed and samples were taken for diagnostic purposes. Samples tested negative for the presence of *Renibacterium salmoninarum* (the causative agent of BKD) by PCR, therefore, the Initial Designation Notice (IDN) covering the site has been withdrawn. If, in the future, clinical signs of BKD are observed on the site, the Fish Health Inspectorate must be informed immediately.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed: [redacted] Date: 13/08/2025

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

BUSINESS NO	FB0125	**DATE OF VISIT**	17/07/2025
SITE NO	FS0209	**SITE NAME**	Scallastle
CASE NO	20250271	**INSPECTOR**	[redacted]

Amended Fish Health Inspectorate Visit Report

This report replaces the fish health report R09 issued on 31/07/2025 by [redacted] The previous report should be discarded. In the "Observation" section, "7.2km" has been replaced with "7.258km".

Section 1: Summary

During the inspection of stock at the above site, one moribund fish was observed exhibiting bilateral exophthalmia. This fish was removed for further examination. Histopathological analysis showed no evidence of significant pathological changes. Gill histopathology was compromised by post-mortem artefactual distortion.

Please contact myself or the duty inspector should you require any further information, have any queries regarding this report or if any problems develop.

Section 2: Case Detail

Observations

On 15/07/2025, the listed disease bacterial kidney disease (BKD) was confirmed at Fishnish A (FS0427). As Scallastle is within one tidal excursion (7.258km), a statutory inspection was carried out to rule out or confirm the presence of BKD.

Mortality levels prior to inspection were relatively low and recently veterinary inspection by a third-party vet detected low levels of amoebic gill disease within the population. Although AGD was detected using a gill swab, clinical sigs of the disease had reportedly not been observed by site staff. Two treatments of SLICE were undertaken during the current cycle due to a slight increase in juvenile lice numbers. Both treatments were successful at reducing the numbers of parasites.

During inspection of the stock, one moribund fish was observed which exhibited bilateral exophthalmia. The fish was removed for further examination. During the necropsy a lack of fat associated with the pyloric caeca was observed.

Samples

R09

Samples were collected from one fish according to the table below:

Fish number	Facility number	Species	Stage	Origin
F1	3	Atlantic salmon (*Salmo salar*)	Grower ~450g 2025 S1	Barcaldine Smolt Unit (FS1328)

Results

Bacteriology: Kidney and gill material from F1 was inoculated onto appropriate media for the isolation of bacteria.

No significant bacteria were isolated.

Tissue samples were tested for segments of nucleic acid indicative of the presence of *Renibacterium salmoninarum* (the causative agent of BKD) using real-time PCR (qPCR). The samples tested negative for the pathogen.

It should be noted that the standard test for BKD is carried out using qPCR, therefore, no specialised media for the growth of *Renibacterium salmoninarum* was used.

Virology: Tissue samples were tested for segments of nucleic acid indicative of the presence of the pathogens specified below using qPCR.

The samples tested negative for infectious haematopoietic necrosis virus (IHNV), infectious pancreatic necrosis virus (IPNV), infectious salmon anaemia virus (ISAV), salmonid alphavirus (SAV), piscine myocarditis virus (PMCV) and viral haemorrhagic septicemia virus (VHSV).

Histology: Tissue samples of gill, skin and skeletal muscle, heart, pyloric caeca, pancreas, hind gut, liver, spleen and kidney were taken from F1. The tissue samples were fixed in 10% neutral buffered formalin.

Histopathological examination revealed the following:

Gill: Post-mortem artefacts.
Skin & Muscle: Within the normal range.
Heart: Epicarditis, minor.
Gut and pyloric caeca: Within the normal range.
Pancreas: Within the normal range.
Liver: Vacuolation (macrovesicles), mild, diffuse.
Kidney: Few dilated renal tubules.
Spleen: Peritonitis, mild.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Fish 1: external view

Fish 1: internal view

Case No: 2025-0272 Date of visit: 17/07/2025

Additional inspector(s): Main Inspector: [redacted]

Site No: FS0696 Site Name: Fiunary
Business No: FB0125 Business Name: Scottish Sea Farms Ltd

Case Types: 1 STI 2 DIA 3 4 5 6

Water Temp (°C): 14.1 Thermometer No: T172 FHI 045 completed N

Observations: Region: HI Water type: S CoGP MA: M-35

Dead/weak/abnormally behaving fish present?	Y	If yes, see additional information/clinical score sheet.
Clinical signs of disease observed?	Y	If yes, see additional information/clinical score sheet.
Post mortem signs observed?	Y	If yes, see additional information/clinical score sheet.
Diagnostic samples taken?	Y	

UNI/REG only - if unable to carry out intended visit detail reason below:

Additional Case Information:

Inspection undertaken following confirmation of clinical BKD at a site within one tidal excursion, Fishnish (A) (FS0427)

Wild wrasse on site at the time of inspection

Winter sores (Moritella viscosa) detected after input together with Vibrio sp. Mortality did not exceed notifiable criteria although there was a small increase in mortality in wk 16. Report from vet observed. Fish fed with Biomar "Assist skin" to reduce affects, this was reportedly successful.

Most recent histo report from inspection on 30/06/2025. Only pathology was mild heart (mostly mild epicarditis) and gill pathology (mostly mild lamellar branchitis), possibly indicative of a mild viral infection, reportedly. No signs consistent with BKD noted.

Ten moribund fish observed within the cages were removed. Five were taken for diagnostic sampling

Freshwater treatment used from 08/07/25 to 11/07/25 to treat gill issues as gill scores rose slightly

Case No: 2025-0272 Site No: FS0696

Date of Visit: 17/07/2025 Main Insp: [redacted]

Registration/Authorisation Details

1. Business/site details summary checked by site representative?	Y
2. Changes made to details?	N

Site Details (include cleaner fish for all sections)

Total No facilities	8	Facilities stocked		7	No facilities inspected		8
Species	Atlantic salmon	WRS					
Age group	S1 25	Mixed					
No Fish	571,437	14,766					
Mean Fish Wt	926g	Mixed					
Next Fallow Date (Site)	Q3 2026		Next Input Date (Site)		Q1 2027		
Recent (last 4 wks) disease problems?		N	Any escapes (since last visit)?				N
If yes, detail:							

Movement Records

1. Movement records for **all species** held available for inspection?	Y
2. Date of last inspection:	20/05/2024
3. Are records complete and correctly entered?	Y
4. Are movement records available for dead fish and waste?	N/A
5. Are records complete and correctly entered?	N/A
6. Have all introductions and imports (since last inspection) from outwith the GB health zone been recorded the movement records?	N/A

Transport Records

1. Are any movements carried out not using a STB (by (or on behalf of) the business)?	
If yes, is there a system in place for maintenance of transportation records?	

Mortality Records

1. Mortality records for **all species** held available for inspection?	Y
2. How are mortalities disposed of?	Incinerated - on site
If other detail:	
3. Mortality records complete and correctly entered?	Y
4. Recent mortality (last 4 wks):	SAL: wk 29: 386 fish (0.07%), wk 28: 621 fish (0.11%), wk 27: 382 fish (0.07%), wk 26: 420 fish (0.07%). WRS: wk 29: 160 fish (1.42%), wk 28: 122 fish (0.79%), wk 27: 146 fish (1.4%), wk 26: 337 fish (1.84%).
5. Evidence of recent increased/atypical mortalities?	N
If yes, facility nos/no mortality per facility/no stock per facility/reason:	
6. Any other peaks in mortality during period checked?	Y
If yes, detail:	CMS detected in last cycle, Aug 2024. Mortality peaked at 1.81% in wk 33 due to this. Mortality above notifiable criteria in wk 30, 32, 33 and wk 34 due to same pathogen. Exceeded criteria again in wk 41 for 1 week due to CMS again
7. Have increased (unexplained) mortalities been reported to vet or FHI?	N/A
If yes, detail action:	
8. Have 'mortality events' been reported to FHI? If no, enter details on mortality events sheet.	Y

Treatments and Medicines Records

1. Recent treatments (see comment)?	Y
If yes, detail:	T.M.S.
If other, detail:	
2. Medicines records available for inspection?	Y
3. Are records complete and correctly entered?	Y
4. Are fish in a withdrawal period?	Y
5. If yes, what treatment(s)?	T.M.S.
If other, detail:	
6. Are medicines stored appropriately?	Y

Biosecurity Records

1. Biosecurity records available for inspection?	
2. Has the manner and frequency of mortality removal, recording and safe disposal been considered?	
3. Has the manner and period in which the APB will notify Scottish Ministers or veterinary professional of any *increased* (*unexplained)* mortality at the site been included?	
4. Has the action that will be taken in the event that the presence or suspicion of the presence of a listed disease is detected been included and *how* and *when* that will be notified to Scottish Ministers?	
5. Has the health status of aquaculture animals being stocked on the farm site been covered (equal or higher health status, certification if required)?	
6. Have the husbandry and biosecurity measures implemented between each epidemiological unit to minimise transmission of disease been covered (movement of staff, visitors, equipment, live or dead fish etc.)?	
7. Is documentation available regarding the measures in place to maintain the physical containment of aquaculture animals held on site?	
8. Have the biosecurity procedures been adequately implemented on site?	
If no, detail:	

Results of Surveillance

1. Has any animal health surveillance been carried out by, or on behalf of, the business?	Y
2. If yes, are results available for inspection?	Y
3. Any significant results?	Y
If yes, detail (if not detailed under recent disease problems).	CMS - see above

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

BUSINESS NO	FB0125	**DATE OF VISIT**	17/07/2025
SITE NO	FS0696	**SITE NAME**	Fiunary
CASE NO	20250272	**INSPECTOR**	[redacted]

Amended Fish Health Inspectorate Visit Report

This report replaces the fish health report R22 issued on 29/07/2025 by [redacted] The previous report should be discarded. The wording of the 3rd paragraph has changed.

The above site was inspected as it is located within one tidal excursion of a site where the presence of clinical bacterial kidney disease (BKD) has been confirmed. A visit has been arranged to confirm or rule out the presence of clinical BKD at this site.

All epidemiological units were inspected. Signs consistent with the presence of clinical BKD were observed and samples were taken for diagnostic purposes. Samples tested negative for the presence of *Renibacterium salmoninarum* (the causative agent of BKD) by PCR, therefore, the Initial Designation Notice (IDN) covering the site has been withdrawn. If, in the future, clinical signs of BKD are observed on the site, the Fish Health Inspectorate must be informed immediately.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed: [redacted] Date: 13/08/2025

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

BUSINESS NO	FB0125	**DATE OF VISIT**	17/07/2025
SITE NO	FS0696	**SITE NAME**	Fiunary
CASE NO	20250272	**INSPECTOR**	[redacted]

Section 1: Summary

During a statutory inspection of the stock, clinical signs of disease were observed and five fish were removed for diagnostic sampling.

Histopathological examination revealed mild inflammation of the heart and degeneration of the compact layer of the cardiac musculature. This cardiac inflammation could be associated with a sub-clinical viral infection, most likely related to piscine reovirus (PRV) which was confirmed by QPCR. In the kidney, mild, multifocal necrosis was observed. One fish exhibited signs of cachexia and two fish displayed mild dermatitis. Evaluation of the gill tissue was hindered due to post-mortem artefacts, limiting interpretation.

From bacteriology, two separate *Vibrio* spp. were identified. The level and purity of growth would not suggest these bacteria would be present as primary pathogens.

Please contact myself or the duty inspector should you require any further information, have any queries regarding this report or if any problems develop.

Section 2: Case Detail

Observations

On 15/07/2025, the listed disease bacterial kidney disease (BKD) was confirmed at a nearby site. As Fiunary is within one tidal excursion (7.258km), a statutory inspection was carried out to rule out or confirm the presence of BKD.

Mortality in the four weeks prior to the inspection was relatively low. An inspection by a vet 17 days before the FHI inspection identified some mostly mild pathology affecting the hearts and gills. Winter sores (causative agent *Moritella viscosa*) were observed on the site shortly after input. *Vibrio* sp. was also identified in the population.

A freshwater treatment was carried out in July 2025 after gill scores rose slightly. The treatment was reportedly effective at reducing gill scores.

During the inspection of stock, ten moribund and lethargic fish were removed from the cages, and five of these were selected for diagnostic sampling.

UKAS Accredited Inspection Body - Type C No. 0269
Marine Laboratory, 375 Victoria Road, Aberdeen, AB11 9DB
Tel – 0131 244 3498 Email – ms.fishhealth@gov.scot
Website - https://www.gov.scot/policies/fish-health-inspectorate/

The external signs of disease and gross pathology for these fish are listed below:
F1: Moribund, lethargic, pale gills, slightly grey kidney, lack of fat associated with the pyloric caeca, no food in the gut and yellow pseudo faeces present.
F2: Moribund, lethargic, a small amount of clear ascites observed internally, lack of fat associated with the pyloric caeca, no food in the gut and yellow pseudo faeces present.
F3: Moribund, lethargic, lack of fat associated with the pyloric caeca, no food in the gut and yellow pseudo faeces present.
F4: Moribund, lethargic, anorexic, a slightly pale liver, slightly swollen kidney, lack of fat associated with the pyloric caeca, no food in the gut and yellow pseudo faeces present.
F5: Moribund, lethargic, pale gills, lesions on the flank, lack of fat associated with the pyloric caeca, no food in the gut and yellow pseudo faeces present.

Samples

Samples were collected from five fish according to the table below:

Fish number	Facility number	Species	Stage	Origin
F1 & F2	7	Atlantic salmon (*Salmo salar*)	Grower ~900g 2025 S1	Barcaldine First Feeding Unit (FS1325)
F3 & F4	4	Atlantic salmon (*Salmo salar*)	Grower ~900g 2025 S1	Barcaldine First Feeding Unit (FS1325)
5	8	Atlantic salmon (*Salmo salar*)	Grower ~900g 2025 S1	Barcaldine First Feeding Unit (FS1325)

Results

Bacteriology: Kidney, gill, and lesion material from F1 – F5 were inoculated onto appropriate media for the isolation of bacteria.

It should be noted that the standard test for BKD is carried out using qPCR, therefore, no specialised media for the growth of *Renibacterium salmoninarum* was used.

The following bacteria were isolated:

- *Vibrio* sp.: F2 and F4 (kidney)
- *Vibrio* sp.: F1 & F5 (kidney); F5 (lesion)
- Unidentified bacteria: F3 & F5 (kidney); F5 (lesion). This bacterium was not fully identified but did not match the characteristics of a known fish pathogen.

Tissue samples were tested for segments of nucleic acid indicative of the presence of *Renibacterium salmoninarum* (the causative agent of BKD) using real-time PCR (qPCR). The samples tested negative for the pathogen.

UKAS Accredited Inspection Body - Type C No. 0269
Marine Laboratory, 375 Victoria Road, Aberdeen, AB11 9DB
Tel – 0131 244 3498 Email – ms.fishhealth@gov.scot
Website - https://www.gov.scot/policies/fish-health-inspectorate/

Virology: Tissue samples were tested for segments of nucleic acid indicative of the presence of the pathogens specified below using real-time PCR (qPCR). Gill pathology was observed in F1 and F5 so these fish were sampled for salmon gill poxvirus (SGPV), *Paranucleospora theridion*, and *Neoparamoeba perurans* (AGD).

SGPV

Fish Number	Endogenous control Cp value	Cp Values			Reported Result (PCR)
F1	-	-	-	-	Negative
F5	20.18	36.41	36.28	37.41	**POSITIVE**

Piscine reovirus (PRV)

Fish Number	Endogenous control Cp value	Cp Values			Reported Result (PCR)
F1	18.29	21.75	21.79	21.90	**POSITIVE**
F2	18.40	20.93	21.32	21.29	**POSITIVE**
F3	17.61	18.64	18.54	18.76	**POSITIVE**
F4	18.48	26.80	26.88	26.76	**POSITIVE**
F5	18.54	22.66	22.99	23.09	**POSITIVE**

The samples tested negative for infectious haematopoietic necrosis virus (IHNV), infectious pancreatic necrosis virus (IPNV), infectious salmon anaemia virus (ISAV), piscine myocarditis virus (PMCV), salmonid alphavirus (SAV) and viral haemorrhagic septicemia virus (VHSV).

Parasitology:

Tissue samples were tested for segments of nucleic acid indicative of the presence of the parasites specified below using real-time PCR (qPCR).

Paranucleospora theridion

Fish Number	Endogenous control Cp value	Cp Values			Reported Result (PCR)
F1	20.27	36.43	34.64	35.49	**POSITIVE**
F5	20.18	36.15	35.94	37.66	**POSITIVE**

The samples tested negative for *Neoparamoeba perurans* (AGD).

UKAS Accredited Inspection Body - Type C No. 0269
Marine Laboratory, 375 Victoria Road, Aberdeen, AB11 9DB
Tel – 0131 244 3498 Email – ms.fishhealth@gov.scot
Website - https://www.gov.scot/policies/fish-health-inspectorate/

Histology: Tissue samples of gill, skin and skeletal muscle, heart, pyloric caeca, pancreas, hind gut, liver, spleen and kidney were taken from F1 – F5. The tissue samples were fixed in 10% neutral buffered formalin.

Histopathological examination revealed the following:

Gill: Post-mortem artefacts (F1-F5) with F2 and F3 exhibiting several aneurysmal dilation/telangiectasia - these artefacts hindered reading.
Skin & Muscle: Mild dermatitis (F2, F5), with Gram-negative bacteria (F2).
Heart: Myocarditis, mild, multifocal (F1, F3, F5), endocarditis, mild, multifocal (F1, F3). F1 and F5 also exhibited musculature degeneration at the compact layer. Epicarditis, mild (F1-F3, F5).
Gut and pyloric caeca: F4 exhibited an absence of abdominal adipose tissue and some peritonitis. Post-mortem artefacts marked (F1, F2, F4, F5).
Pancreas: Within the normal range.
Liver: Hepatocellular vacuolation (macrovesicles) (F2) and areas of pyknotic nuclei (F5).
Kidney: Areas of interstitial necrosis were observed in the haematopoietic tissue (F1), F4 showed a slight increase in melanomacrophages.
Spleen: Some perivascular cuffing was observed (F4) and F2 slightly congested.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.
